Computer Weekly is not for sale to the following categories in the UK and Eire only:
Company directors
Company secretaries
Management services associates
Civil servants responsible for computing
Management/operating computer
Lecturers and teachers
DP Manager/consultants
Systems analysts/IBM officers
Programmers
Operations
Computer education
Field engineers

Controlled Circulation Department: IPC

Time for the DPM to communicate with users

WHEN the economic chips are down, as they are now, the DP department can no longer use the mystic aura of technology as its reason for existing. Instead, like all service organisations, it has to market, sell and prove its worth to its customers — its users.

Organisations with DP departments are now being asked to deliver the economic goods, to provide an efficient service which enables the organisation to increase its services productivity, profitability, etc at a time when it is not possible to spend lavishly on new equipment or on increasing the work force.

Technologically, the DP department is under attack from minis and micros, a situation which threatens to result in information processing anarchy.

Gone are the clear-cut days where a company's spending on computers was solely in the hands of the DP manager. Office managers are now being sold computers in the guise of word processing systems or office machines.

Independently minded managers, tired of the costs, overheads and delays caused by

past computer implementations, may now take it into their heads to get their own micro-based system for a few thousand pounds.

That is the main reason why DP managers have supported Professor Dijkstra's thesis that micros represent a 25-year step backwards.

As the capital expenditure on hardware drops, it is enticing for non-DP managers to get their own system to give them more apparent control over their own information processing than if it was part of the DP department's money-tempted grasp.

DP people know, however, that hardware costs are the least significant element these days, and a lot of money could be spent in re-experiencing the painful software birth pains of the modern computer industry.

The only way for the DP department to fight off the dual pressures from users and technological developments that distribute computer power outside the DP ghetto, is to get out and explain and sell DP services to users.

The communication skills needed to bridge the gulf between user and DP

department are essentially the same as the communications skills needed in any other selling or public relations operation.

Unfortunately such marketing attributes are not always seen as an intrinsic part of the make-up of the good DP manager.

This week Computer Weekly is starting a series by a specialist in the art and science of human communications, Nigel Laurie (page 19). At the end of the series, Laurie will be conducting a workshop at which these techniques can be discussed and developed in more depth (see below).

At the same time, a survey of DP managers will aim to establish the current state of communications between the DP department and users, pinpointing useful techniques and areas of neglect.

The rewards for the DP department as a result of improved communications with users will be invaluable in increasing the perceived value of the DP department.

This will give the DP manager more status and more power when it comes to putting the case for the DP department to be seen as the focal point for any organisation's total information service.

It will enable the DP manager to argue more effectively that pockets of mini/micro centres should not be allowed to develop outside the overall control of the DP specialists.

And it will, at last, bring down the barriers between users and DP people, which will improve the status and career opportunities of DP staff and also help to ensure the effectiveness of DP systems.

Ten years ago...

COMPUTER WEEKLY
OCTOBER 19, 1967.

THE 1966A, "a giant computer with more than twice the power of Atlas," was announced by ICL, the company's first venture into the use of integrated circuits. . . . The largest communications network which STC had ever sold, and which included both the first-generation principles of Sord and the 6300 AOX system, was officially opened in London for the Royal Navy. . . . A £1 million project which, it was predicted, could give British the lead in the computerised process control field was planned jointly by AEL, the Steel Company of Wales and the Ministry of Technology. . . . A scanning technique for the production of narrow strips of parts that could not be reduced to a mathematical specification was demonstrated by Siemens. . . . Japan's Meteorological Agency ordered an Automatic Data Editing and Switching System, AOEI, consisting of two 9600 control computers and a Tach 6400. Weather information was to be collected and analysed on an international service with Washington and Melbourne.

Lodge clerk makes good. . . Ronald Smith, 23, left school at 16 and became a lodge clerk. He has just become the thousandth student to come through a course run by Control Data Institute as part of the government's Training Opportunities Scheme and find a job. He is now a sales programmer at George Wimpey at Hambleton, West London.

Training project backed by EEG

COMPUTER managers and training officers are getting together in December at a workshop funded by the EEG and aimed at improving the training of computer staff.

The workshop is part of the second phase of a study into training started by the EEG three years ago (CW, October 10, 1974). That phase, funded to the extent of £11,000, showed up a lack of communication between computer managers and their companies' training officers.

This latest phase, with £15,200 worth of backing, will bring the two groups of people together to get an understanding of each other's work.

The workshop will give each pair of training officers and computer managers a model of a company with training problems. They will analyse the company's needs and produce a course for staff.

One of the major aims of the project is to produce a standard, ideal training programme for general release.

The workshop will be held in Munich on December 7-8. Like the first phase of the project, it is being organised by the Institute of Personnel Management and the National Coal Board's subsidiary Computer Power. The working language will be English. The cost is £80, which includes accommodation.

Further details can be had from Malcolm Campbell, Institute of Personnel Management, Central House, Upper Woburn Place, London WC1H 0HX. Tel: 01-387 2844.

Called the 1500, the new system can have two floppy disc drives with a total of 500,000 characters of storage, 32K bytes of random access memory and a display terminal which includes five programmable function keys.

The 1500 can communicate with IBM mainframes under 3780 protocols, and interfaces for other mainframes are under development.

Software includes Dateform and Database, high level languages for data entry, validation, editing and for limited data processing. All software is upward compatible.

Datapoint's UK distributor, Venek, said that with prices ranging from £4,800 to £8,000 the 1500 was one of the most competitive systems of its kind.

Datapoint's UK distributor, Venek, said that with prices ranging from £4,800 to £8,000 the 1500 was one of the most competitive systems of its kind.

The software, which is based on a transportable operating system, comprises a variety of specialist testing packages. They include the industry standard Atlas and Membrain digital programming languages, which is compatible with earlier Membrain test software.

and keyboard, and a floppy disc system. This forms the basis for the MB7730 high volume printed circuit board functional tester, the MB7710 transportable tester for using factory test programs in the field, the MB7750 analogue function and in-circuit inspection tester, and the MB7700 simulation and logic

Nixdorf plans 50 Mbyte mass storage cassette

A NEW mass storage system for the business computer market is under development by Nixdorf Computers in Paderborn.

Like the IBM 3850, the Nixdorf device will store 50 Megabytes on each cassette, but there the similarity ends (CW, October 24, 1974).

The IBM cassettes are four inch long capsules, whereas Nixdorf is working on cassettes similar to those used for videotape. Nixdorf also plans to offer single 50 Megabyte cassettes as a cheaper alternative to a second disc drive.

The single cassette version is likely to appear next year, and the multiple version will follow once the stacker mechanism for loading the cassettes has been developed. Nixdorf envisages stackers capable of loading

anything from 10 to 100 cassettes.

Nixdorf is also working on an extended controller for disc and tape subsystems based on the Zilog Z-80 microprocessor for use with its 8870 line of business computers. It will be possible to initiate loading of a complete 50 Megabyte cassette into the disc either from the CPU or from the extended controller.

A key benefit of the extended controller is that it will enable the user to change the type of disc he uses without altering his application software.

The company is putting a major development effort into the 8870/1 business system, which runs under an operating system developed in Canada and originally used the DCC 110 minicomputer also used in the Nixdorf-Entrex key-to-disc systems. The DCC 118 mini was designed to run Data General Nova 1200 software and was the subject of a lawsuit before Data General acquired DCC.

Nixdorf is now developing a new processor for the 8870/1

which will again use the Data General instruction set but will be architecturally completely different; the company therefore does not expect any lawsuits from Data General.

Memory on the new processor will extend to 128K 18-bit words, and it will be possible for two CPUs to share all main memory and peripherals. At present the 8870/1 supports up to four workstations, but that is to be extended to 18.

Nixdorf is also using a software generator, Chlico. Checklist input-customer oriented output, to customise applications in its Comet business package more cost-effectively.

The customer can either answer the questions which define his requirements via a VDU on the 8870/1, or by responding to a printed questionnaire.

The concept of the applications software generator was explained in some detail by Bill McKeeman at the Newcastle seminar on the teaching of computer science (CW, September 15).

Why Heinz is backing Britain

A rosy future for the UK is predicted by Heinz Nixdorf, founder and head of Nixdorf Computer of Germany. "I am buying long-dated British Government stock [gilt-edged securities], and I believe the UK has one of the brightest futures in Europe," he said.

Speaking at the company's Paderborn headquarters last week, Herr Nixdorf went on to question the extent of the damage done by strikes in the UK.

"How many days a year are lost in Germany through Roman Catholic holidays?" he asked. "They cost us far more in lost working time than strikes cost Britain."

Nixdorf said that had he not been born in Paderborn, he would be investing in the UK right now. Nevertheless, plans to build a plant in Ireland have stalled over building costs. Nixdorf has a big new plant in Paderborn and is not prepared to pay a premium of more than 10 per cent for a similar plant in Ireland. The best quote he has had so far is 60 per cent more than the £150 a square metre he paid in Paderborn.

ICL Pascal users expect boost

WITH the prospect of an ICL-supported compiler on the 2800 for the structured language Pascal, interest in the language among ICL users is bound to grow. A group formed earlier this year for exchange of information and software among ICL Pascal users is anxious to harness this interest.

An extension of the group's activity which has just begun is negotiation with the Numerical Algorithms Group, which already produces a large library of scientific routines in Algol 60, Algol 68 and Fortran, with a view to translating the library into Pascal. This effort is being co-ordinated by David Barron of Southampton University.

The 2800 Pascal compiler is being developed for ICL by a consortium of universities, and should emerge by the middle of next year. The 1900 compiler was developed by Queen's University, Belfast.

Sussex. It aims to act as a conventional "user group" for the 1900 and 2800 compilers, meeting to discuss developments and circulating reports on enhancements and bugs, as well as avoiding duplication of effort in development of Pascal software.

An extension of the group's activity which has just begun is negotiation with the Numerical Algorithms Group, which already produces a large library of scientific routines in Algol 60, Algol 68 and Fortran, with a view to translating the library into Pascal. This effort is being co-ordinated by David Barron of Southampton University.

The 2800 Pascal compiler is being developed for ICL by a consortium of universities, and should emerge by the middle of next year. The 1900 compiler was developed by Queen's University, Belfast.

Our new computer firesafes give big protection for even the smallest user

Our range is designed for the mini as well as the maxi user. In fact we make the smallest computer firesafe in Europe, if you need it. All models include protection for word-processing systems.

So just select the safe that suits your requirements. You'll find it fully adaptable for combination storage of mixed media and you know you can rely on its protection properties because it's made to Stratford standards and independently tested.

For the full story contact Stratford Safe Co. Ltd., Borehamwood, Hertfordshire or ring U.K. Sales 01-353 9433/4311.

DP/user workshop

IMPROVING the skills of DP management in communicating with user departments is the main objective of a workshop to be held in London on December 1.

Organised jointly by the Data Processing Management Association and Computer Weekly, the workshop will be run by Nigel Laurie, managing director of Communications Audit.

To ensure that the workshop will be of practical benefit to those attending, Communications Audit has prepared a survey of user communications techniques which will be used as input to the workshop.

The survey will be sent shortly to all DPMA members; other Computer Weekly readers can obtain a copy of this survey form from the DPMA.

Topics to be covered at the workshop will include examinations of particular communications techniques, such as the use of booklets, house journals and internal user reports, as well as an overall

look at the future role of the DP department and the role of user communications in DP strategy.

During the day there will be an opportunity for smaller working group sessions in addition to presentations to the full workshop.

A series of articles by Laurie in Computer Weekly (see page 19) will set the scene for the subjects to be tackled.

Places at the workshop will be limited to ensure that each participant obtains maximum benefit from the day. If there is sufficient demand, further workshops will be held.

The workshop will be held at the Holiday Inn, George Street, London W1, near Marble Arch. It costs £45 plus VAT (£49 plus VAT for DPMA members). Application forms can be obtained from IPC Business and Industrial Training, Throby Way, Sutton, Surrey SM1 4QQ.

Survey forms can be obtained from the DPMA, 27A York Road, Middlesbrough, Cleveland TS6 1SQ. Tel: 0626 29678.

Contenders for Info-Line

AN announcement is expected shortly as to which company will operate the Info-Line information service which is sponsored by The British Library, Department of Industry, Chemical Society, IEE and Derwent Publications (CW, June 16). BOC Datasolve, CRC Information Systems and

Hoskyns are reported to be among the contenders. Last week the US-based Information service, the Lockheed Dialog system, was demonstrated to librarians in London. It offers access to 17 million abstracts from technical sources around the world and already has over 100 UK users.

KNIGHT PROGRAMMING SUPPORT

Successful Software Support Specialists since 1970 in the UK and abroad

27 NOEL STREET, LONDON, W1. 01-457 2154

INTERRUPT...

The prospective purchaser of a key-to-disc system was visiting the manufacturers at Hounslow, West London for a demonstration. Behind the scenes, the engineering and support staff — as often happens at demonstration time — were feverishly trying to get the system on the air. But flashing error lights were constant reminders of their failure. Front office was beginning to run out of ideas to distract the waiting customers when the problem was solved. As it was during the miner's strike, office lighting was off and the demo room's blinds were raised.

This incident occurred during a period of power cuts so the lights were out and the blinds raised. The processor was facing the window, through which the main Heathrow Airport radar could be seen. Every time the radar scanner glided, every processed file finished and the

system crashed. Dropping the blind evoked the problem and the demo followed, whether to a successful sale or not we do not know.

Moral: It is sometimes better to leave your customers in the dark.

Submitted by Harold Mead, of Killecraggan, Scotland, who wins the weekly £5 internet prize.

whistles the tune
"MY WAY"

The true symbol of
"MY WAY" ADAM lets you
hear the music (and your
own voice) through his
whistles.

The star human of the whistling show, grand champion Harvey
Pollock, is introduced by Kip Tillitt of Logical Machine Corp.

Rib-tickling...

IN Carson City, Nevada, October 1 will not be quickly forgotten. On that day 82 people from the world's greatest nation blew off at the start of the first International Whistle-Off.

The Whistle-Off, previewed exclusively in Computer Weekly (Downtime, September 29), was organised by Logical Machine Corp as a publicity idea for Adam, the office computer which you program in natural language. The Whistle-Off was the idea of a firm called Gordon Bennett and Associates. Gordon Bennett!

The contestants included a coachload of people who

accompanied one Sally Cohn with washboards, spoons and thimbles; Jake Pultrum, who, with the help of his fingers, whistled The Battle Hymn of the Republic; and the Adam computer itself, which did My Way its way.

The overall Grand Champion was Harvey Pollock, a barrister from Winnipeg, whose repertoire was based mainly on the works of Mozart.

The real winner, however, was Logical Machine Corp. For highlights of the Whistle-Off were shown on television across the US, radio stations played Adam's effort and many newspapers covered the event.

Magnetic future

OUR recent Delphic poll on future technology (CW, September 29), has aroused a great deal of interest and Dr Christopher Evans and his helpers are now analysing the hundreds of replies.

A mini-poll, based on our questionnaire, was held last week at Stanmore Junior College, north London, during an evening meeting on mathematics and computers, which included a talk by our editor on Can Computers Save Britain — and Who Cares?

An interesting conclusion of the mini-poll was that a ma-

jority of the 20 or so sixth formers and maths teachers questioned believed there would never be an anti-Luddite computer movement.

The results of the Stanmore poll were brought into question, however, when it was discovered that, due to some confusion, one of the questions asked, "When would magnetic media be replaced by solid state devices?" Although neither the interviewers nor interviewees understood the question, 15 people had a shot at it and eight of them said it would happen after 1986!

Some weeks ago, in his Mythology column, Tom Gilb attacked what he considered to be overstated benefits of database techniques. In his general criticism he referred to the threat of the increasing use of minis for databases — machines which he considers inadequate for such tasks.

Exploding the anti-mini myth

IT is well known, and has been accepted from Biblical times, that you cannot be a prophet in your own country. It is therefore not surprising to find Tom Gilb slaying dragons of IMS, Codasyl and databases on minis in an environment separated from his homeland (Norway) by the North Sea (CW, September 8).

One of the reasons why he has yet to find a successful database user, be it IMS or a Codasyl type database, is that he has a gift for either not meeting them, or when he meets them of carefully forgetting the conversation afterwards.

At a packed meeting of the Norwegian Computing Society last year I opposed him on several accounts, and I would now like to describe why.

My own experience is limited mainly to that of implementing a Norwegian Codasyl database system on a Norwegian mini-computer. However, I would like to show how that refutes Tom Gilb's arguments.

Database manipulation languages are not obsolescent, as Gilb claims, mainly because they (I am thinking of Codasyl) still represent the cheapest way to do it, and there is nothing to replace them anyway.

The next step is relational databases, when their use can be explained in three (or maybe four) letter words and the hardware has arrived I don't think it takes long to set sets and record types à la Bachman to an intelligent person who knows nothing about computers.

The results of the Stanmore poll were brought into question, however, when it was discovered that, due to some confusion, one of the questions asked, "When would magnetic media be replaced by solid state devices?" Although neither the interviewers nor interviewees understood the question, 15 people had a shot at it and eight of them said it would happen after 1986!

And that's what he needs to be able to express his problems in acceptable terms.

Database languages do not encourage the use of complex file structures. A given database system will give a choice of possible storage structures and access mechanisms. A database will be a model of some part of an organisation for which one wishes to record and handle data and produce useful information from it.

A successful application of a DBMS occurs when one has arrived at an adequate model which reflects both data and its usage and which can be relatively easily converted to a physical database using the facilities of the chosen DBMS. Total failure and non-cost effective database applications can more often than not be traced to insufficient understanding of the problem; or trying to start too big too soon.

GO TO statements and virtual memory have been much maligned because of their misuse. Anybody can misuse anything including database management systems.

We at Norsk Data have been implementing online databases on minicomputers since January 1975. We now have some 30 installations running from five to six terminals, a 128K byte machine, 10 Megabyte disc up to a multi-machine distributed database system with four machines, 1.5 Megabyte core, 200 Megabyte disc, plus 60 terminals on a data network.

How then can Gilb claim that database systems are too lavish for minis?

If a customer knows what he wants he can be in production with his DBMS online within from one to three months after getting his hardware. If he isn't running a test database inside

Now the challenge has been taken up by Jeremy Slater of Norsk Data, the only computer manufacturer in Norway, Gilb's homeland. Slater makes the case for online database systems using minis, and outlines some of the facilities such configurations can provide.

three to four weeks then something's wrong.

Of course mistakes can be made. We had one case when membership in a manually maintained set was used as a status indicator. There were 50-60 set members per set, and it had been implemented as a single chained set. One consequence of that is that we now vet all database designs, thereby taking upon ourselves the responsibility for any "heavy" databases.

I have spent a year teaching people to use our DBMS online, using one-week courses. Most students can program and they are normally online against a predefined database using a simple query language at the end of the first day. It takes about two days to learn the DML.

If you can get an order entry system using a DBMS up and running with multi-user concurrent access, logging / recovery / privacy / online in four weeks from scratch, how would you justify not using it? If you belong to an organisation which moves with the times, how is changing your database every other month going to go without the reorganisation facility supplied as part of the DBMS you don't use?

I agree with Gilb that minis are a threat, but it is certainly not a threat to the user, it is a threat to the continued use of mainframes for database applications. The quality of software of all types on minis is now not particularly different from that on mainframes.

On minis you can: Run time sharing, batch, remote batch and real time, simultaneously; use Fortran, Cobol, Basic, Simulink, BCPL, Coral 68, Algol, PL/I, etc; have a few thousand M-bytes of online disc

storage; machine-machine protocols as standard; and online DBMS.

It is in fact nonsense to say that they are "unsuitable due to the lavish overhead costs". Our DBMS, called Sibas, includes facilities for Codasyl, multi-user concurrent access; a maximum database size of 3.6 x 10 bytes; complete privacy functions; complete backup/recovery roll-back before/after image logging; an average 20-30 DML calls executed per second; and distributed databases standard software.

It is better to have your database on a mini because on-line it is always cheaper; it is physically portable — and it is good fun to go distributed!

Finally, our first customer for a database decided to go that way because they wanted to distribute the availability of information around their concern, and have it online.

In 1975 they jumped in moving from a Cobol/IBM batch environment, to a mini/Fortran online service with five or six terminals, 128K byte and 8 Megabyte disc.

They now have two databases each on its own mini, compiled via software with 24 terminals. Any or both databases can be accessed simultaneously from any terminal. They have decreased costs (totally), increased production, and they are now buying a third machine.

The author
Jeremy Slater has degrees in physics from both Oxford and London. He has been in the computer business since 1970 and has been involved in the design of systems software for minicomputers, databases, file systems, operating systems and programs for handling video output.

Rory Anderson

Following in the footsteps of Hedsor . . .

AN imaginative programme ranging from discussions of the social and political impact of computers to computer cartoons has been organised by the British chapter of the ACM for its 1977/78 programme.

Three of the sessions will follow up the themes of the Hedsor Park weekend conference earlier this year, entitled "Can computers save Britain?" (CW, July 14). The conference was organised by Computer Weekly and the ACM, which is the US equivalent of the BCS.

Dr Christopher Evans, psychologist and computer scientist, will start the programme

next Tuesday (October 25) and will look at the psychological and social impact of computers. On January 17 next year Barrie Sherman, research director of the white collar union ASTMS, is to discuss the effects of technological change, particularly on the working environment. And on April 11, a panel discussion of government policy for computer technology will include Conservative MP Ian Lloyd and Ray Atkinson, director of the Central Computing Agency.

The other sessions outside the themes of the Hedsor conference start with Logica chairman

Philip Hughes discussing industry changes over the last year on November 29.

On February 28, Colin Emmett of the Royal College of Art will discuss computer cartoons, including film demonstrations, while on May 23 Ruyter Pye of Communications Study and Planning Ltd, will look at mass communications.

All meetings will take place at the Polytechnic of Central London, 115 New Cavendish Street, London, WC1, and start at 7.15 pm. Wine and refreshments will be served from 6.30 pm.

Ian Lloyd, MP

Users can have a say

Computers can still have a say on the Carter Committee's report on the Post Office, as copies of the survey being carried out by the Data Processing Management Association and Langton Information Systems are still available.

But hurry, as the questionnaires must be returned in the next 10 days. Results will be published in December.

The address of the DPMA at 27a York Road, Maldenhead, Berkshire. Tel: 0628 29979.

ICL gains firsts in Denmark and USSR

TWO firsts have been notched up by ICL. One is an order from the USSR for a 2903 and the second is a move into the Danish market with the 2960 ordered by a manufacturer of cable, wire and nails, Nordiske Kabel-og Traaefabrik.

The 2903 is going to the Academy of Medical Sciences in Moscow, which co-ordinates research projects in the 50 medical research institutes around the country.

The academy will run the IDMS database management system to keep track of the projects and, will also collect

public health statistics for the World Health Organisation.

The 2903 is the academy's first computer. The £200,000 machine will have 24K of memory, two 60 Megabyte disc drives, a 7502 terminal, two direct data entry stations and two display terminals.

The 2960 in Denmark will replace a 1903A and enable Nordiske Kabel to expand its communications network, which serves a wide variety of users within the company throughout Denmark. The 2960 will serve eight 7502s, 41 terminals and support IDMS.

Expanding BIS on the takeover trail

THE BIS group of companies is seeking to expand its activities through the takeover of other companies or by giving financial backing to groups of individuals wishing to start their own operations.

During this year, BIS has approached over 20 companies with a view to a possible takeover but none of these discussions have led to any positive outcome.

If the circumstances are right, BIS would be interested in taking a minority stake in a company during an "engagement" period, after which either the BIS holding could be increased — or the company could decide to sell back its share.

For the financial year ended February 1977, the BIS Group had a turnover of £2.7 million with a pre-tax profit of £356,000. According to chairman of the group, Roger Graham, they are currently on target for a turnover of over £3.6 million.

Graham believes that to maintain this growth rate, the group will need to extend its operation and it is likely to acquire a minority interest soon in a company outside the computer industry, but which uses computers as an integral part of its operations.

Within the computer business, Graham told Computer Weekly that the group has defined a number of specialist areas in which it is interested, including systems houses, service bureau, word processing and point-of-sale distribution applications.

Graham typified the types of operations which he believed could meld into the BIS group as "companies or groups of individuals wishing to maintain

Roger Graham . . . need to diversify outside the computer industry.

techniques and a wide range of training and consultancy activities; BIS Software, which provides custom built software and systems such as the Midas banking and insurance series; and BIS Deltic, which provides self-instruction systems for in-house training.

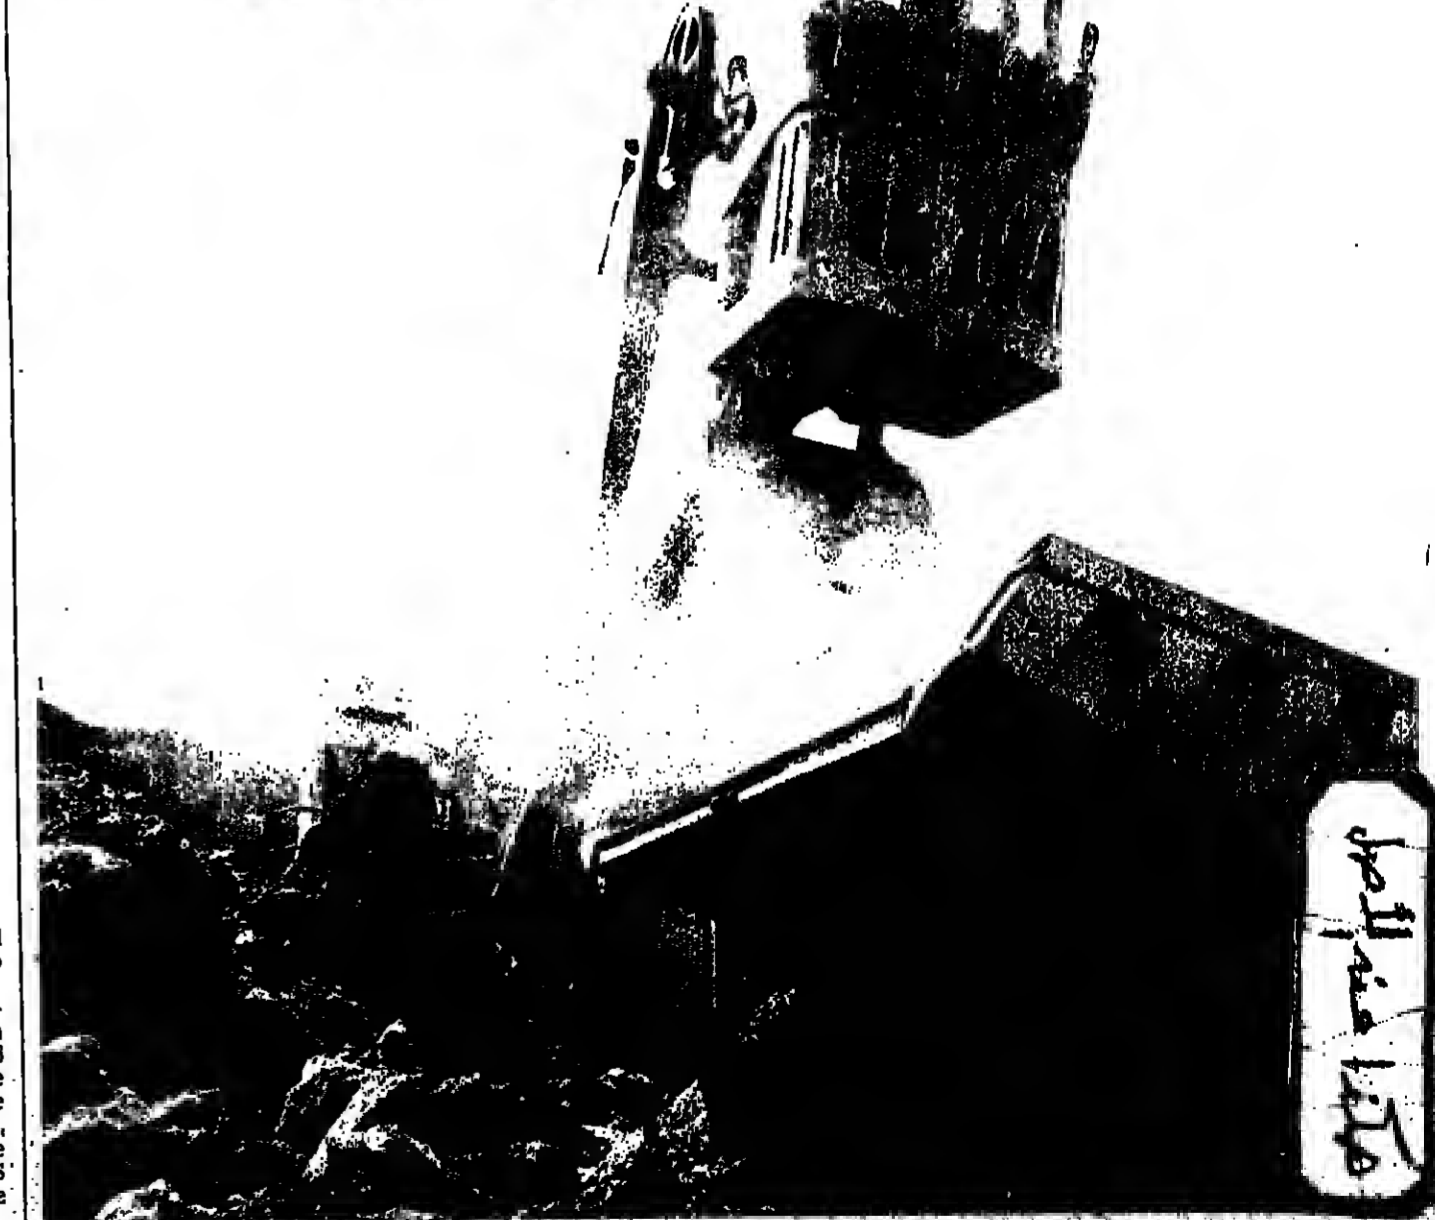

BIS Software was formed when BIS took over software house Kingsley-Smith and Associates two years ago (CW, November 13, 1975).

The group also has operations

In Australia, South Africa, America, Sweden, Teheran, Singapore and Hong Kong.

David Tebb, director of BIS Applied Systems, is now touring Australia, South Africa and Hong Kong, giving courses on database and real time system design. He will also be a speaker at the annual Australian Computer Society Conference later this month.

Exciting things happen with Prime Computer

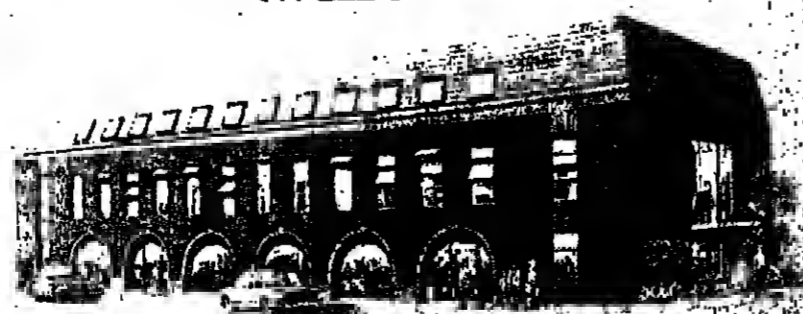

With 24 hour working and 20 tons of rock removed with every shovelful Taylor Woodrow need their Prime computer to optimise open cast excavation — profitably. If your business has requirements as diverse as structural analysis, vehicle route planning and financial project control, Prime has a computer in its range to suit.

Prime Computer (UK) Limited, The Mercury Centre, St Peter's Street, Bedford MK40 2PN and The Coach House, 123 Sleet Lane, London SW14 4BN. Telephone Bedford 0234 85121 or London 07-878 4945.

GILB'S MYTHODOLOGY

Database diagnosis programs

AS a matter of routine system design for about the last seven years, I have made it a practice to specify a "database diagnosis program" in any system which includes a complex central file or database. I do it as naturally as I have put on my car safety belt since 1960.

I know that not everybody shares my interest in seat belts, but I don't push the point since, in the long term, optional seat belts will result in an increased group of reliability-oriented system designers.

I have been surprised, as the years speed past, and the literature on databases increases explosively, to find virtually nothing on the use of database diagnosis programs in this literature. This inevitably results in most database systems being planned without such a facility. In the long term a set of analysis programs will be developed to solve some obvious operational problems such as mysterious breakdowns in the database. But unfortunately these will often be created for one-time use and discarded shortly thereafter.

A database diagnosis program should, in fact, be a focal point of continued development of our ability automatically to analyse one of our most critical resources, the central database. It should probably be developed over a period of years as experience dictates. This means that it must allow the user a wide variety of parameter options as to what shall be analysed and how deeply it shall be analysed. Data Base Diagnosis (DBD) programs can quickly become very machine-resource demanding, if not limited in some way.

A DBD program can be far more effective if it is considered early in the design of the project. One reason for this is that the fundamental redundancy within records and fields which is a prerequisite for detection of certain classes of errors, can be designed into the records and fields from the beginning. Another reason is that the benefits of DBD can be enjoyed throughout the entire project development cycle.

It is an anachronism to think that the application programs provide the necessary tests on records and input data, to guarantee the quality of the database. A true database implies many independent programs which only see part of the data picture BUT WHICH ARE CAPABLE OF DESTROYING ALL OF IT OR ANY ONE PART OF IT.

Only a DBD program, like the Data Base Administrator concept, can keep quality control over it all. A database diagnosis program can include every conceivable validity test, applied elsewhere to all fields and records. There is no reason to be afraid of repeating checks (use the same subroutine). It gives protection against failure of one set of checks, and has the added advantage that the DBD program checks can be used as a test of the program.

A DBD program is an excellent automatic program testing aid during initial program development. It tests that all the programs are co-ordinated to the common agreements on records and data elements. It should be a required part of the program development cycle.

And it should insist on and require their own private

DBD program, as well as the possession and use of one for the programmers. DBD program amounts to automatic auditing and is the only practical way of thoroughly checking a large database.

A complete DBD program which tests all indexes, chains, records, fields, inter-field relationships, inter-record relationships and even relationships between the database and other existing files, is really, if you think about it, an automatically readable description of the database. Instead of all the incredible energy which I see presently being devoted to making and maintaining humanly readable database documentation, we should redirect it to putting the same specifications in programmed form. The obvious result is the saving of human effort to read record printouts and to read DB documentation with a view to assuring the correctness of one or both.

One bank which listened to this advice, and applied it to an eight year old "no problems" database in an online system, got a list of 300,000 errors in about a million accounts. The money amounts were all right but the statistical classifications of customers, from which marketing and top management got their reports, was very wrong. Result?

Several months overtime at the branches to clean it up and a 20 minute DBD program run each morning to keep it clean - by top management order.

For more information see my book "Data Engineering (Student Literature)".

SOFTWARE FILE

Index generation package in UK

THE role of word processing software in the office of the future has been increasingly recognised, but a kindred subject - index generation - is seldom approached by the developers of commercial word processing equipment. The Austrian developer of an index generation package is seeking to fill this gap in the UK market, by negotiating an agency in this country.

Index generation for character-string data is usually applied to academic areas like literary and linguistic analysis. Ivo Stelackner, the developer of the present package, intends that it should be applied in more "down-to-earth" areas like office correspondence.

"If a businessman knows that he sent a letter to so-and-so about roller bearings, but can't remember the date, he queries

the index under the name of the company and "roller bearings" and it will pull out all letters referring to both."

The index is generated in batch mode from "any machine-readable text," such as a tape of correspondence built up from day to day by a word processing system. Obviously, in such a case, periodic re-runs will be needed, to generate the index for the updated tape.

The index generation software will search for phrases as well as single words in the text. To determine initially the correct depth of indexing, a user would normally wish to run the package several times with different parameter values, said Stelackner.

The software will run on the IBM System 32, or any other machine with an RPG compiler, he said. He is also willing to rewrite the package in another language if there is a demand for it.

There are already two prestigious users of the system - the German Standards Institute and the International Telecommunications Union, in Geneva. A test run has also been made by the European Space Agency.

Revised US version for Hoskyns system

A RANGE of manufacturing software, originally designed in the UK by Hoskyns, has emerged from the US in a radically new version, aimed at accommodating the growing use of database. Further versions, directed at the expanding mini-computer market, will be Hoskyns' responsibility.

The Hoskyns suite was originally known as Standard Systems, but, for US consumption, was renamed Modular Applications System. In the US, it is handled by Martin Marietta Data Systems, of Baltimore, which subsequently took control of Hoskyns (CW, April 13, 1975).

MAS II and related new versions have been placed under the general heading of MAS-80. The major innovation with MAS II is that the modules, instead of using several conventional files, are centred around a single database.

MMS has developed modules to manage the leading database management systems and present the user with a consistent interface. MAS II is accessed in transaction mode, and includes its own small TP monitor, while MAS I worked in batch.

The policy is to direct MAS development effort to the countries where appropriate expertise exists, explained Neville Certontyne, who is in charge of developments outside the US.

Certontyne said that the first approaches would obviously be to the market leaders such as Digital Equipment, Data General and possibly the IBM Series 1.

Experienced users

A MISPLACING of one or two letters can often create entirely the opposite impression to that intended. It is doubtful that any readers of the item on the Display users' conference (CW, October 6) seriously thought that local users would be talking about "the 'maxperience' with the system." The intended phrase was, of course, "their experience."

Puzzler

WHEN this type of information is available, about any right-angled triangle, there is an ancient formula which gives the length of the hypotenuse in only a few seconds. Can you work out what it is before turning to page

The first mini implementations should emerge by March 1978; and future plans include implementations for mini-mainframe distributed systems, as well as stand-alone minis.

The database-oriented MAS II is already available in the US and should begin to be marketed in the UK at the end of this year. MAS is built of six suites, handling production control, inventory management, order processing, cost control, business planning and financial management.

IAM released in US

A RIVAL for IBM's Vsam and Isam disc-file access methods has been generally released in the US and Canada, and is likely to make its appearance in the UK soon. The product, Innovation Access Method, IAM, comes from Innovation Data Processing, of New Jersey.

IAM employs a straightforward indexing system with single reads and writes, which is claimed to avoid time-consuming following of logical chains and a good many unnecessary calls to systems software routines.

The product already has a number of users in the US, who have reported time savings of over 50% in the running of some programs. Until now, the product has been on "limited distribution."

Westinghouse, agent for many Innovation products, confirms that it is examining IAM with a view to UK marketing, but no final decision has been made.

EVERY IBM USER MUST KNOW ABOUT SNA

A MESSAGE TO MANAGEMENT

If you are involved in developing an IBM teleprocessing system you can't ignore SNA. You may already be committed to SNA without realising it.

We announce a one day seminar entitled

"INTRODUCTION TO SNA"

Designed to give a quick impartial introduction to SNA, the day will cover conceptual overview, significant features and organisational requirements for successful implementation.

Lecturer: MR. BRIAN BURCH who designed and implemented the world's first OS/VS1 based user SNA network.

Date: 17th NOVEMBER 1977

Venue: MAYFAIR HOTEL, LONDON W1

Cost: £85.00 + £5.20 VAT (including luncheon)

Phone Brian Burch for booking forms and further details

IF YOU ARE AN IBM USER YOU ARE INVOLVED WITH SNA. THIS IS SOMETHING YOU SIMPLY CAN'T IGNORE.

10 Dover Street, London W1X 3PH. 01-499 4444

EDITED BY STEPHEN BELL

Filing fiche with Data Boss

A NOVEL application for a database management system has been found by Florida Computer, of Miami. The company has successfully marketed its database management system Data Boss (CW, September 30, 1976), to installations in the US with very large microfiche libraries. UK agent Turnkey Software, of Chalfont, Bucks, is now approaching the same market in Europe.

Users with large microfiche libraries have much the same requirements as those with large computerised databases, notably a need to access the same microfiche by several different keys. The Indexed Data Boss system is well-suited to this kind of retrieval.

The simplest approach is to retrieve from the database a reference number which will tell the user where to look for the appropriate fiche or film on a separate physical storage medium.

The terminal can, however, be linked direct to some kinds of microfiche reader, so that retrieval is completely automatic. Data Boss runs on Digital Equipment PDP-11s, under the RSTS-E operating system.

US users of the Data Boss microfiche system include the FBI Air Force Base, Utah. The file managed by the system there will eventually have a size of 2,500,000 records.

UK price for the basic system is £8,000. This supports a database of up to 32 Mbytes. There are further charges for more capacity and multi-level indexing, but the terminal-reader interface is included free.

Interdata enhances OS/32 MT system

WITH an enhanced version of the OS/32 MT operating system, Interdata has introduced dynamic memory management techniques on its 32-bit minicomputers. At the same time, the company has released an operating system adjunct approaching the growing on-line programmer market.

The dynamic version of OS/32 MT2 supports up to 255 concurrent user tasks. The previous version of the operating system had the same theoretical limit, said UK director Gordon Ambidge, but in order to exploit it practically the tasks had to be very small. With dynamic memory management, 255 concurrent tasks became a practical reality, he claimed.

Dynamic memory management examines the actual memory requirements of tasks at regular intervals and adjusts the size of the partitions appropriately, rather than setting up fixed partition sizes in advance.

Such "heuristic" approaches to producing increased throughput have been employed by other mini manufacturers, such as Data General with its Advanced Operating System (CW, November 25, 1976). AOS manages the problem by adjusting priorities rather than memory partitions.

Online programmers are accommodated through the separate Multi-terminal Monitor. MTM supports up to 10 concurrent terminal users and background batch tasks.

Software to maintain private user file directories is included.

MTM, which is the first interactive multi-user capability on Interdata equipment, ensures that programs and files for testing are kept rigidly separate from production programs.

Dynamic OS/32 MT will be officially released in the UK within the next two weeks. Implementation of a similar operating system on Interdata's 18-bit equipment is being considered, but no firm plans have been made yet.

The staff at Interdata's UK software development centre played no part in the development of the latest operating system, but there are hints that the UK centre is working on another large project, as yet undisclosed.

● In its 16-bit line, Interdata has released the 16E processor, capable of addressing up to 256 Kbytes of memory. At the same time, an enhanced release of the OS/16 MT2 operating system has been made, with event driving of tasks and intertask communication. A new Fortran IV compiler is also available.

● The latest product, Stars (Status Revision System), allows the actual progress of tasks to be monitored against the schedule previously generated by Value's Scheduler. Monitoring of tasks in the processor itself is automatic, using data from IBM's System Monitoring Facility. Outside the machine, progress of tasks such as data preparation are notified manually, through terminals.

Stars will warn the user when actual performance is falling behind schedule, so that the schedule can be reorganised, if desired. If a job goes wrong, the user can be informed of any other jobs which depend on it and, in consequence, cannot be processed.

A number of large users in the UK are already interested in the package, said an RTZ spokesman. A UK price has not yet been established.

Scheduled warnings from the Stars

THE range of software products designed by Value Computing, of Philadelphia, to assist the operation of a DP installation, has been extended with another scheduling aid. Like Value's earlier products, it will be marketed in the UK by RTZ Value, a division of RTZ Computer Services (CW, March 31).

The latest product, Stars (Status Revision System), allows the actual progress of tasks to be monitored against the schedule previously generated by Value's Scheduler. Monitoring of tasks in the processor itself is automatic, using data from IBM's System Monitoring Facility. Outside the machine, progress of tasks such as data preparation are notified manually, through terminals.

Stars will warn the user when actual performance is falling behind schedule, so that the schedule can be reorganised, if desired. If a job goes wrong, the user can be informed of any other jobs which depend on it and, in consequence, cannot be processed.

A number of large users in the UK are already interested in the package, said an RTZ spokesman. A UK price has not yet been established.

Hoskyns ties up another FM deal

ANOTHER facilities management contract has been gained by Hoskyns. The company has taken over the ICL 2803 and asson data processing staff at Customagic, of Manchester, maker of furniture coverings.

In a few months the 2803 will be moved from

Customagic's site to Hoskyns Manchester Systems Centre. This will enable Customagic to continue using the machine, while saving office space. The company also expects to make a 30 per cent saving on its OP budget. The deal is valued at about £100,000.

Customagic's site to Hoskyns Manchester Systems Centre. This will enable Customagic to continue using the machine, while saving office space. The company also expects to make a 30 per cent saving on its OP budget. The deal is valued at about £100,000.

PROGRAMMER NOTES

Documentation—need to be all things to all men

DOCUMENTATION is one of the most widely criticised aspects of programs - both the documentation intended for the guidance of a non-computer-oriented end-user, and that which will only meet the eyes of fellow programmers.

In its widest sense, documentation includes everything from end-user and operator instructions to the flowcharts and the comment lines in the coding. A critical, seldom asked question is whether the programmer should be expected to write material aimed at these various audiences equally competently.

Installations, conscious of the criticism of increasingly rigid standards, means means of narrative and diagrammatic documentation. Many programmers find this to be the job of a "designer" or "writer" of the code, and of little relevance to the job of the programmer. The inescapable result, however, is that the documentation, how do the readers of this column, is the problem of documentation for all these

different purposes? Are you called upon to be a technical writer as well as a programmer? Do you consider yourself adequate to the task, or do you think DP departments could benefit from employing a specialist technical writer?

Programmers are in a good position to judge maintenance documentation, since they are both its producers and its consumers. Is too much or too little documentation required by "installation standards"? What kind of documentation do you find most helpful, and what do you think is unnecessary?

Documentation is also the interface between user definitions of the problem and the formulation of the program to handle it. As such, it is the weak link in the program development process. Can anything be done to strengthen it - for example, a formalised "designer" language? If so, of what kind?

What form of documentation do you like to receive from the designer of the problem, whether user or systems analyst?

Online Programming—Has our information reached your desk?

As the largest independent suppliers of Online Programming Products in the UK, we wanted to bring IBM 360/370 managers up to date on our developments. So we recently sent you a package containing our latest information. We hope that it reached you safely.

Computer Program Products Ltd, CAP House, 14, St. Giles Street, London WC1N 3DY. Telephone 01-242 0021.

If not, we'd very much like to hear from you, so we can arrange for a replacement package right away. Just phone us or drop us a line. We'll send you our latest online information package - and a general brochure, too, if you'd like it. This tells you more about our Online Programming Products and the other products in our range.

OTHELLO

the game you will never want to stop playing!

COMPUTER WEEKLY

In conjunction with the David Hann Organisation, offers readers OTHELLO, the world's latest selling game.

OTHELLO is a game of strategy for two players. It is played with two-sided, black and white counters on a squared board. At each move you capture one or more rows of your opponent's pieces by trapping them between your own pieces. The captured pieces are turned over to show your colour. The process switches back and forth throughout the game, and part of the appeal is the potential for dramatic reversals right up to the last move of the game.

Please send me notes of OTHELLO at £3.75 per set. I enclose a cheque/postal order for £ made payable to the DAVID HANN ORGANISATION. Send this coupon and your payment to Computer Weekly Othello Offer, c/o David Hann Organisation, 7 Brighton Road, Surbiton, Surrey, KT6 8LX. Use block capitals - this coupon will be your address label.

ROSCOE

Librarian/online

The LIBRARIAN, ADR's Source Program Management System, is one of the computer industry's most widely installed software products with over 3000 installations. It has been the recipient of several awards including Data's Software Honor Roll and ICF Five Million Dollar Club.

To service the needs of S/360 and S/370 installations operating in real-time environments, several optional on-line facilities are available with The LIBRARIAN.

The LIBRARIAN/Online (LIB/OL) is a low-overhead, online source maintenance system designed for use with S/360 or S/370 installations operating with CICS or other teleprocessing monitors. All of The LIBRARIAN's updating functions available to programmers working in a batch environment can, with LIB/OL, be invoked from teleprocessing monitor terminals.

The LIBRARIAN/Online Extended, an advanced version of LIB/OL, is fully compatible with S/360, S/370, and S/390.

The LIBRARIAN/TSO interface bridge between the LIBRARIAN and TSO is a bidirectional communication link.

Argos to install in-store system

AS part of its expansion programme, Argos, the Green Shield stamp company's catalogue showroom chain, is to install computer systems worth over £200,000 at the 20 new showrooms being opened later this year and early 1978.

Each showroom will have a Comet 1608 computer with 24K main memory handling up to eight Comet terminals. These terminals have calculator-like keyboards and both they and the computers are made by Comet Computing Systems of Bedford.

With the new system, sales assistants using the terminals will make stock level and price inquiries.

The stock level of any item is displayed on the terminal together with the price, and the assistant can key in the quantity the customer requires. This order is then printed out in the stockroom instructing any of

Dr. Mike Smith, Argos director of marketing (left), and Rex Ingram of Comet, talk with one of the sales assistants at the Argos catalogue showroom in Oxford.

the storemen to pick up the item and load it on a conveyor belt.

Better management information will than be available to the store management as stock movements can be followed, and one future application could be routine stock re-ordering from the main warehouse by each branch store.

By using this system, Argos is hoping to minimise costs by gaining a better picture of its constantly changing merchandise situation.

£750,000 LesterNet order for Burroughs

TO the outside world, all building societies may look similar, yet each one takes a completely autonomous and individualistic view of the best ways to meet the requirements of its customers.

While pioneering societies like the Britannia believe that real time passbook updating at branch counters is the shape of

things to come for the whole movement, others like the Leicester believe that offering a comprehensive savings bank service is less important than providing an efficient savings and loan service as most effectively as possible.

The Leicester is installing a nationwide network of VDU's, one at each of its branches, but has developed against real time file inquiry and updating on its twin Burroughs B3700 installation at Oadby, Leicestershire.

Instead, each day's transactions will be transmitted throughout the day to the mainframe, but will be checked and batched up on disc for overnight processing; online file inquiries will be answered with the previous day's balances.

"A real time passbook updating system would be much more expensive than we are planning, and real time file updating would also be much more demanding of systems effort," Paul Rylett, computer manager at the Leicester told Computer Weekly. "We simply don't believe that the extra cost is justified at present."

In order to implement the new network, the Leicester has placed a £750,000 order with Burroughs for 170 TD 833 VDU's, three B774 front-end processors, and 192 TA 2401 modems, which

have just been given the UK Post Office approval.

The Society estimates that over a five-year period its modem cost will be 50% of what it would have been if it had control 2400 bps devices from the Post Office. It is Burroughs' first UK order for the TA 2401.

Two of Burroughs' special software aids are being used to implement the Society's communications system, called LesterNet.

Burroughs' Network Definition Language will be used on the B774s for generating the operational software, and will communicate with the Burroughs Message Control System on the B3700s.

The B3700s are expected to meet the Society's requirements for two to three more years, with the addition of further memory and peripherals, after which there will be a full evaluation of hardware available at that time.

The Leicester Society was formed by an amalgamation of the Leicester Permanent and the Leicester Temperance Building Societies. The Leicester Permanent was the first to install a computer in the early 1960s, and switched to a B3500 in 1971 while the Temperance used the Centre-file bureau, running its files on IBM hardware, which have all now been transferred to the twin B3700 system.

Low cost Scrumpi II

A REVISED version of the low cost microprocessor development system, Scrumpi, has been introduced by Bywood Electronics. Known as Scrumpi II, the system offers several enhancements for the old price tag of £25.

The main differences between Scrumpi I and II are the addition of 512 bytes of PROM and 512 bytes of RAM, edge connector and wire breaks in the buses for external connections, and the use of the National Semiconductor, 8C/MPII microprocessor (CW, August 11). One of the edge connectors carries this bus for connection to external systems.

Although still programmed in the same way as Scrumpi I (CW, September 8), using mode and data switches, Bywood is also working on the development of a keyboard and display unit that will act as the I/O device for Scrumpi systems.

Based on the use of a National clock chip, used primarily for its display and driving capabilities, it will offer the potential of a high complexity time control system, capable of triggering up to 160 different command signals in a 24-hour period, which could make it well suited to many industrial applications.

Announcing CA-SORT Release 5.0

Enhancing CA-SORT twice a year gets harder all the time.

That's because we've been at it every six months for the last six years and the package has achieved a level of performance that becomes increasingly more difficult to improve on — as even our competitors will admit.

But we keep on trying anyway — and maybe that's why we're pushing the 2000 user mark worldwide.

Release 5.0, for example, brings a number of improvements in sort performance, I/O management and flexibility.

There has been a further

reduction in I/O accesses through extension in the command chaining logic.

String extension techniques have been enhanced and the sort has been finely tuned for VS through use of monitor systems.

Full support of 3350 disks (as provided by IBM Release 34) is now available and, under DOS, support for multiple input devices (tape and disk) is now provided.

Finally, DOS users may now profit from optimum work device assignment through automatic resolution of work I/O device conflicts.

IBM users in 28 countries continue to switch to CA-SORT at the rate of about 100 a month. There must be good reasons.

You can determine easily for yourself what these are. CA-SORT is available for a 14-day evaluation entirely without charge.

It takes about 10 minutes to install without interruption to any work in progress. Why not call your nearest CA office — or mail the coupon to us today for a prompt reply.

COMPUTER ASSOCIATES

DATAPRO, a well-known American research organization, conducts a survey each year to determine the most valued software packages in use in the USA. To our knowledge, CA-SORT 77, a two-time winner, is the only European package to achieve this coveted award.

Shape of devices to come from Zilog

FURTHER information about the eight-bit single-chip microcomputer and 16-bit "number crunching" micro were given last week by Ralph Huppertmann, executive vice-president of Zilog, when he spoke at a seminar at the Larch Foundation, near High Wycombe.

The Z-8, eight-bit device (CW August 4) is now scheduled to appear in quantity in March. Intended primarily for stand-alone applications, particularly where system memory requirements are small, the device has an on-board memory capacity of 2K bytes of ROM and 10K bytes of RAM, together with 32 I/O lines.

Seventy-six bytes of RAM are available as general purpose read/write memory. The 32 I/O lines are formed into four ports, in which reside the remaining 20 bytes of RAM. Of the four ports, two are constructed as full eight-bit units, while one is four-bit in four-bit out. As the I/O ports contain the remaining registers, the device allows several data manipulation functions to be carried out in the ports rather than the other internal registers.

All 32 lines of I/O can be used for external memory addressing, offering a total capability of 128K bytes, equally divided between program and data storage. In addition, two of the lines can be used to form a simple universal asynchronous receiver/transmitter, UART, serial I/O port.

Other features include an

internal vectored multi-level interrupt system, two timers and a 100-scanner for timing and event counting, and a single five-volt power supply requirement. Plans are in hand from Zilog for the introduction of an add-on module for the MDZ development system to accommodate the Z-8.

Similar plans are afoot for the Z-8000, the official designation for Zilog's 16-bit predicted 16-bit microcomputer. Currently planned to appear next June, the design would appear now to be settled, as the layouts for the production masks are being finalised.

Ungermann, without being shown too specifically, offered the seminar delegates an interesting overview of the device. However, as already predicted (CW, October 13), its throughput capabilities will be broadly similar to that of the PDP-11/70 minicomputer, and will employ a similar architecture.

Its instruction set will be compatible at assembly language level with the Z-8 device, and it will offer such facilities as hardware multiply and divide. Available in Ungermann predicted package, the latter version, it that in the latter version, it would be possible to directly address up to 8K bytes of memory. On the question of price, Ungermann would only state that it would be competitive with the TMS-11 CPU from Digital.

Practical guide for managers

PRODUCTION control systems are covered by two new books* from the National Computing Centre.

The first, part of the Computer guide series, is a practical guide which identifies problems and helps managers to get the best from their systems.

The guide is needed because, the NCC says, that, despite long experience in the field, industry still makes the same mistakes

especially during system implementation. The other book is a guide to the earlier NCC books on production control systems.

Computers and the Production Control Implementation, produced by the NCC, is available for £3.50. Further details are available from the NCC, 100, Tottenham Court Road, London W1P 0LP. Tel: 01-252 3444.

Three more reasons why ITT Business Systems means business.

These are the three latest additions to an already extensive range of data communications products from ITT Business Systems.

Individually, they offer you a new and extended capability based on the latest computer technology. Each of them can help to make your life easier and your business more efficient.

But collectively they have something more to say — they demonstrate that ITT Business Systems really does mean business.

That's important because it means there is one supplier of computer peripherals large enough to lead the way. A supplier, moreover, with the technical resources and nationwide sales and service organisation to provide a real competitive edge.

ITT 3630 Multifunction Intelligent Terminal System

The ITT 3630 is an intelligent terminal system. It can be used as a remote batch terminal or, simply by changing a diskette, as a data entry system, or an interactive terminal.

These functions are supported by advanced, proven software — DEGEN. This allows you to generate a data entry and transmission system. It is designed to enable more efficient data input and reduced software development costs.

System control can be located just where you want it.

The ITT 3630 is a quiet, easy-to-use system designed to look good in any office.

And because ITT is one of the world's largest and most successful companies, you can be sure that when we say we mean business, we mean what we say.

ITT 3805 Programmable Communications Controller

The ITT 3805 is a comprehensive and powerful programmable communications front-end processor for attachment to IBM mainframe computers. It provides flexible network control and enhanced networking without the need to change tried and tested applications or mainframe software.

The 3805 will also allow greater choice of communications techniques in the future and can show significant savings in network costs.

ITT 3230 Visual Display System

The ITT 3230 Visual Display System has been specifically designed to meet all the data communications needs of the Systems Designer, the DP Manager and, of course, the operator. It's very versatile, good looking and above all, cost-effective. No equivalent system offers so many features at a comparable price. The ITT 3230 with its diskette attachment is particularly suited to file enquiry and update although many will see it in a data entry role.

Other ITT Business Systems products include: ITT 3802 Terminal and Communications Controller · ITT 3330 and ITT 2300/8 Data Printers · ITT 3280 range of 3270 compatible Displays and Printers · ITT 2000 series of Modems.

USER FORUM

Damage to data is the biggest threat

UNAUTHORISED insertion, modification and destruction of data are by far the biggest threats to computer installations. This is clear from a study by the Stanford Research Institute of 355 cases of malicious and accidental damage at computer sites.

The study found that 27% of cases involved the insertion, modification or destruction of data and program files held in a computer system and 24% involved data stored outside the system.

Unauthorised use of computer time was next with only nine per cent and vandalism, forced entry and theft of hardware, software

and supplies each accounted for eight per cent of cases. In total, malicious damage was involved in 90% of cases, with both accidents and natural disasters accounting for as little as four per cent.

The study identified different types of safeguard and found that there were far more possible safeguards against data manipulation than against other types of damage.

But at the same time the study found that only 20 per cent of what it called highly-effective safeguards were also broadly applicable, and that many were only applicable to a small area in a risk category.

As the study report says, "It was hoped that the safeguards would have fairly broad applicability within a violation category. However, the narrowness of their applicability within categories means that a facility must employ a set of safeguards to protect against a particular type of threat, even though each of the safeguards might be highly effective in its action."

Most of the high cost safeguards relate to hardware, communications and to the physical security of the installation. The low cost safeguards tend to relate to procedures at an installation or in the computer room.

As the report says, "It is thus important to have a solid policy and procedural foundation for any programme to enhance computer system integrity. The moderate cost safeguards tend to relate to the system safeguards in the computer operations area, particularly to operations controls and password mechanisms."

USER VIEW

'It's too risky saving money'

THE IBM-compatible mainframe manufacturer Amdahl has chosen the UK as one of its two main European bases because it sees the UK as the best potential market (CW, August 25).

But the attitude of the UK data processing manager could prove this argument wrong, according to one major UK user.

The user, who took part in the Computer Weekly survey on attitudes to plug-compatible processors (CW, October 6), said, "If we buy an Amdahl processor, and thus save our company money, we get no credit. And if it goes wrong we get jumped on from on high. So there's no incentive to move from IBM."

Another aspect of this attitude was pointed out by Bill Read, managing director of Univac (CW, September 8). He said, "US companies are much more cost-conscious in all areas and price is very important. The UK manager tends to take the attitude that if it's the company's money, his

spending cost is not of prime importance." As well as being unprofessional, this attitude could lead to a vicious circle, with the likes of Amdahl having trouble getting a foot in the door, and the IBMs of this world getting a stronger grip on the market.

And why should the data processing manager worry about what the company is going to think about him if its plug-compatible machine, bought on his advice, isn't a great success? The DP department's name is probably mud in the company anyway because of all those application systems which were delivered late and keep going wrong.

So why aren't you all rushing out to get plug-compatible machines to replace your mainframes? Is it fear of failure? Or lack of confidence in the suppliers? Or have IBM and the others done such a good sales job that you just haven't thought of it? User Forum would like your views on buying or not buying plug-compatible machines.

Emulation keeps Belgian glass manufacturer happy

WHEN Honeywell launched the Series 80 over three years ago, one claim made for the small to medium sized 64/20 was that it could run in G-100 mode, thus giving users of the General Electric computers taken over by Honeywell a chance to transfer easily to the new main Honeywell line.

Many of the early level 64 customers were G-100 users and one of them, Verilpack, a Belgian manufacturer of glass and plastic containers, is happy enough about running in G-100 mode to put off conversion to native Series 80 mode until it has sufficient resources available for the job.

And not only has the company, part of the Franco-Belgian engineering giant Empain

These glass bottles are about to be packed automatically at Verilpack's factory. The production of bottles, the setting and packing is all done automatically and the main hold-up in the past was the manual handling of details on stocks. This, too, is now done automatically by the MTS 7500 terminals.

Schneider, been able to transfer its programs directly from its old G-136, but it has at the same time been able to take advantage of the 64/20's communications facilities and give its factories and administrative departments online access to the central machine.

"We use the G-136 programs unchanged on the 64/20," said José Schmitz, head of computing at Verilpack. "And most of the programs run 20 per cent faster on the 64/20 in G-100 mode than they did on the G-136."

The emulation software takes almost 100K of memory, but the software is free. We also pay 20,000 Belgian francs, or £2,850 a month, for firmware." The cost of running in G-100

mode is sufficiently low to prevent Verilpack from regarding program conversion as a top priority. In fact Schmitz has not even given a firm completion date for conversion.

Verilpack is more immediately concerned with getting its six factories and eight main administrative departments online. It is nothing up something of a first here, as it is the first user to link Honeywell's MTS 7500 terminal systems to a level 64 computer.

The MTS 7500s are in the factories and used to record information on staff working hours and on stocks. The transmission of data to the 64/20 in Brussels is done nightly so that files are always up-to-date, whereas formerly the data was sent manually, punched on 11 cards, processed and sent back to the factory for error checking. It was sometimes a week or even 10 days before stock information was recorded centrally.

A final word on the emulators came from Honeywell: as a spokesman pointed out, explaining the number of satisfied users running under G-100 mode. "We have been through a lot of mergers, what with General Electric and Machines Bull, so we have a lot of experience in emulation."

Their first—and last—taste of independence

AFTER a brief spell of independence, UK users of the Texas Instruments 990 minicomputer have rejoined the main European users' association, TI-MIX. But having proved the point that they are a group in their own right, they are rejoining as the 990 regional group rather than as individual users.

The 990 users broke away from TI-MIX in the summer, arguing that they were hardware-oriented, while the 990 and 980 minicomputers were used more for data processing and process control applications (CW, August 28).

PROFILE

George 2 Group

THE George 2 user group, part of the ICL Computer Users' Association, meets four times a year in London, Birmingham and Manchester. The meetings give the group's 170 members the chance to exchange ideas on software, with special emphasis on the George 2 operating system on the 1800 range.

A typical meeting is divided into a number of sections, some of which include:

THE POST BOX: Members are encouraged to express any problems regarding operational software. These can relate to software other than George 2, and are recorded in the minutes of the meeting so that advice can be given from members unable to attend.

THE SOFTWARE REGISTER: This is a file of utility programs maintained by Paul Wood, of Sanofi Computer Services. These are available to members free of charge and everyone is encouraged to contribute to the register. At meetings any new additions to the file are discussed.

THE REGISTER OF EXPERIENCE: This consists of a list of people with George 2 software experience. It includes information such as a description of the installation in which they are involved and the applications supported. Any additions can be discussed and members can be contacted if advice is needed.

USERS' EXPERIENCE: Users are invited to speak about any problems they have encountered and describe how they overcame them. Members taking similar problems are then able to ask questions and seek advice.

Users say the group provides a valuable service. It enables them to make greater use of their software than would otherwise be possible. ICL representatives attend the meetings, so direct communication is available between them and the users.

Tax forms

STATIONERY supplier PFC (Continuous Forms) of Cradley (Continuous Forms) is now Heath, West Midlands, is now offering P11, P80 and P35 tax forms for the Health contribution National Health contribution forms on continuous stationery, with immediate delivery.

Typical prices for two-part P35 forms are £16.75 for 1,000 and £27 for 2,000. The one-part P80s cost £28.25 for 5,000, £39.95 for 10,000 and £140 for 50,000. The three-part P11/P80s cost £18 for 1,000, £33.35 for 2,500, £56.25 for 5,000 and £225 for the maximum of 50,000.

Managing user communication

Not so long ago you could keep the end user at arm's length. Now people talk about "user rule". End user satisfaction has become a key objective for the DP manager and, argues NIGEL LAURIE (pictured right) in the first of a series of five articles, a key challenge.

He outlines the forces which can stunt the growth of user satisfaction — and shows how

two-way communication can help both users and DP. He offers guidelines for making end user communication pay off — and predicts that before long communication research techniques will join the DP managers' armoury of management aids.

Laurie has worked for over 10 years in the communication and computing fields. After

lecturing and publishing management posts he spent nearly seven years in systems engineering and communication work with IBM. Now he directs his own consulting firm Communication Audit. A member of the International Institute of Communications, Laurie lectures frequently to management audiences on communication topics.

How to communicate with the end user

If there's one challenge every established DP manager faces these days it's the vital need to build end user satisfaction.

That end users form a growing army is a truism. That their taste for independence is well developed we know only too well. The technology lets them pursue it and they are set to become DP's not so silent majority of the future. On their goodwill much progress in DP will depend.

Managing this new found user freedom is not easy. Decrying it may be a tempting strategy but in the end is a self-defeating one. For the end user's drive to independence cannot be halted; it can only be coaxed into sensible channels consistent with corporate strategy for DP. The sound response is thus to focus on user

needs, not user direction; on user communication, not user compulsion.

Such a strategy will be built against a background of rising demands from the end user.

Meeting his needs and holding his goodwill will, therefore, call for quite outstanding skills. For, no matter how trusted the service, intensive training and dedicated support, users will tend to discontent. Once they grasp the potential of computing they will demand more from it. Their complaints then will not arise from the service they have,

but they will be caused by the gap between what they want and what they can be given.

The right strategy must narrow the "expectation gap" from both sides — by managed user communication. It will need to deliver the best service and support it can and bring user demands into line with economic and technical realities.

We already know that frequent communication from users helps. It gives a clear view of their latest reactions. It helps DP draw up service strategies and policies which users will accept. It can prevent minor troubles turning into running sores that can hold back growth. It can make change easier to bring about.

On the user side, good communication from DP builds goodwill. It can head-off the temptation to go it alone with the wrong micro or mini, into a longer term dead-end. It can equip users to make the most of a service, exploit functions to the full and ensure they know what is and is not possible.

And much progress has, of course, already been achieved.

The sustained upgrading of communication skills by DP staff has been computing's "quiet revolution" of the 1970s. Analysts now interview with more insight, write more clearly,

and make the presentation with flair.

User communication techniques have been forged in growing numbers (see figures 1 and 2 for examples). There is no shortage of methods now and the challenge each DP manager faces is finding the right "mix" for his special needs. For, when it comes to communication, every organisation has its own special character. What works well in one will not "take" in another. And the techniques with most obvious appeal don't always do a cost-effective, let alone the best, job.

While methods and skills are well applied, we still must tackle in systematic fashion the challenge of user education in the fullest sense. For, at the root of any communication problem, one finds, if one probes deep enough, not a shortcoming of language or method but a difference of outlook or expectation. And it is the difference between the expectations and viewpoints of DP staff and end users which so often leaves them as two groups divided by a common technology. It explains why much user support fails to reach its full potential.

DP specialists and end users, it can be argued, live in different worlds. Their needs are not the same. The pressures they face are tough — but come from dif-

ferent sources. Their outlooks differ. Their commitments vary widely — from making DP efficient and effective in the whole organisation to writing and working APL cash flow model before lunch. One group knows DP from the inside and hard won experience, the other from more limited exposure.

The first step to improving communication is to recognise these realities. The knock of successful user communication then lies in finding the right ways and means of bridging the gap between the different outlooks and edging them closer together.

Whatever approaches and techniques are used to bridge the gap, successful user communication typically displays several qualities. It will tend to:

- Tie in to user needs — and tell him what he needs to know, when he wants to know it and in a form he can use.
- Talk user language — and cut down on jargon, acronyms, "naïve users" and other terms which should not be let out in public.
- Relate to user realities — we all know the world looks very different from the user's side of the desk. Communication which gets through is geared to the user's outlook, pressures and experience. It takes note of his attitudes.
- Use agreed yardsticks — if users are left with hopes they may not have expressed but can never realise, they become the yardsticks with which they judge the system. To avoid complaint, yardsticks should be agreed in advance.
- Give any service function, DP cannot avoid having an image. It owes it to itself to project the right one to build user confidence. An image of sober, assured, realistic competence is very necessary — with a touch of excellence.
- I'll say more about some of these in later articles.

48 Aids to better communication

- | | | | | | | | | | | | | | | | | | | | | | | |

Figure 1: Many techniques are established. The management challenge lies in selecting the optimum mix for a given situation.

GUIDELINES

Achieving good user communication is a constant task. It makes major demands — on management time, effort and skills, not least because every case is unique. Some general guidelines have, however, been established.

1. Cut the problem down to size. Manage the problem and tackle it in stages. Define the key result areas. Settle on the objectives. Get the facts about how things stand now. Draw up a strategy, then tackle the issues, realistically, one by one.

2. Manage towards objectives. Often, communication tends to look after itself. Systems do get documented. Users receive their reports. Newsletters are issued. Steering committees continue to meet. But too often the return on the effort escapes review. More mileage can be got from

the same effort if clear objectives are set for each item and event. A common complaint often is that a committee, newsletter or report has outlived its purpose. With clear objectives the value of every communication can be checked against time and effort it soaks up.

3. Manage from base facts. Whatever the objectives of end user communication they must be achievable. To ensure this, facts about the audience are vital.

Even if problems are not evident, a communication system, like any human system, needs regular checking and maintenance. Today's communication research techniques are subtle but powerful management aids, when applied with skill. The day when major DP functions put the techniques to work is perhaps not so very far away.

Managing user communication

1. DEFINE KEY RESULT AREAS. Which systems . . . applications . . . user problems . . . users are most critical? For the organisation? For future user relations?
2. SET OBJECTIVES. What must the users know . . . expect . . . understand . . . accept . . . be able to do as a result of our communication?
3. ASSESS THE FACTS. What are the current levels of user satisfaction, expectation and knowledge? Are they satisfactory? Is current communication really needed? Could it be improved? What extra communication is required? Which techniques are most effective in this organisation? What will help users most to get the benefits from computing? Are the communication objectives sound?
4. PLAN A STRATEGY. Validate communication objectives. Define user communication policies. Select communication approaches, systems, channels and techniques to meet objectives in the light of resources, facilities and time needs.
5. CARRY IT THROUGH. Establish the systems and channels. Develop the skills. Stage events. Produce publications, aids and reports. Track results against objectives.

Figure 2: Managing communication is the way to cut a major problem down to size.

INTRODUCING THE CASH-FLOW TWINS

Cost-attractive advanced package systems ready to install

1 MMS Accounts Payable System

Written in ANSI COBOL to run on IBM 360/370 (ICL 6500), Simplicity derived from unique MMS Chain File — including exclusive Date File for information relating to any time period. Positive control over cash disbursements with input validity editing, selective examination of commitments and override facilities for user control. Automatic cheque reconciliation with holdments, credit checking and facilities for multi-company, multi-bank processing with unlimited reporting. Automatic distribution of journal entries direct to General Ledger.

Two separate application systems complementary to each other. Between them you can rationalise your cash flow — in and out.

With complete in-house control and in-depth current and historical data on Payable and Receivable Accounts. Saving substantial overheads and many man-years on systems development.

Install one — you'll want the other. Because they have many advanced data base features — proved in multi-divisions and multi-national situations. Fully interactive, too, with our powerful MMS General Ledger and Financial Reporting System.

We back them with full support services — education, implementation with 31 months maintenance and enhancement.

Presentations without obligation by a Technical Sales Consultant. Simply dial your secretary to phone or write — we'll do the rest.

2 MMS Accounts Receivable System

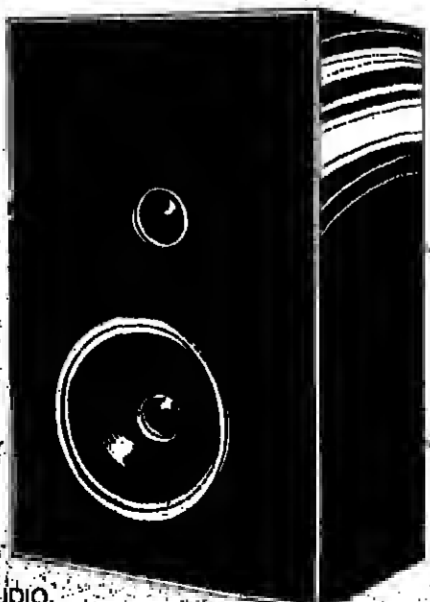

Written in ANSI COBOL to run on IBM 360/370 (ICL 6500). Flexibility for open item or balance forward — intermixing during the same run. Unique Chain File organisation giving high speed cross-referencing and dating between topics, transactions and historical data. Extensive exception reporting during posting cycle with reactions under user control via Cash Forecast reporting with Cash Application Document. That aims to settle key-punch forms. Enquiry capability for customer status with visual display of credit information if needed.

BUILD A 'CLEAN SOUND' LOUDSPEAKER

When you hear it, you'll believe it! Our design measures 19in. x 12 x 9in. and uses two drive units — a KEF type B200 bass and a KEF T15 high frequency unit mounted in a closed-box acoustic enclosure. Special attention has been paid to achieving a very 'clean' sound in the mid-range where the ear is most critical. The speaker will handle 25 watts and is suitable for use with hi-fi. Read all about it in the construction article in this issue. And see, too, full construction details for a new low power microwave communications link — another first for Wireless World, the comprehensive electronics journal.

wireless world ELECTRONICS • TELEVISION • RADIO • AUDIO
October Issue. Out now 40p

In this article, **NANCY POCOCK** explains how the system works.

A patient is positioned in the computerized scanner.

CSA 'Code of Practice' for recruitment companies

The continually expanding market for computer personnel has resulted in many recruitment companies setting up special sections to deal exclusively with this industry. There are also several organisations that concentrate on finding people for jobs in all areas of computing.

To ensure that an acceptable standard is maintained for all concerned, the potential employers, the job seekers and the staff agencies themselves, the Recruitment Division of the Computing Services Association has produced a Code of Practice to guide its members who are dealing with personnel. In addition to that Code CSA members are also bound by the association's Code of Conduct.

The guidelines for the code of practice are given in full here:

A. CANDIDATES

THE RECRUITMENT COMPANY MUST NOT:

1. Exert undue pressure on a candidate to gain his interest in a job, to cause him to attend an interview or to accept a job offer.
2. Denigrate an offer which a candidate has received from another source.
3. Without the express permission of the candidate's current employer, approach with a view to offering alternative employment opportunities, a candidate it has placed.
4. Offer alternative employment to a candidate known, within the last 12 months, to have started or accepted a new job, obtained from another source.
5. Send the candidate's details to a client without first informing the candidate of the name and address of the client UNLESS:

- the candidate has given unambiguous consent for his details to be sent to any possible employer considered suitable by the recruitment company, such consent to indicate whether the candidate's name should be included in the details sent.
6. Knowingly put forward candidate for a job which is unsuitable.
7. Knowingly give incomplete or misleading information to a candidate in order to influence the candidate's decision about a job offer.

THE RECRUITMENT COMPANY MUST:

8. Acknowledge the receipt of all candidates' applications.
9. Inform candidates of the progress of their applications and notify them as soon as a decision has been made.
10. Inform candidates, in advance of interviews with the company or the client, what expenses will be reimbursed and by whom.
11. Provide interviewing facilities which allow interviews to be held without being overheard.
12. Treat as confidential all information about a candidate and not release it or any part of it to third parties, other than clients.

B. CLIENTS

THE RECRUITMENT COMPANY MUST NOT:

1. Without the express permission of the candidate's current employer, approach with a view to offering alternative employment opportunities, a candidate it has placed.
2. Knowingly give misleading or incomplete information about a candidate in order to affect a client's decision.
3. Offer an alternative job to a candidate who has replied to an advertisement paid by a client before that client has expressly rejected the candidate's application, or the candidate has rejected the job.

THE RECRUITMENT COMPANY MUST:

4. Before incurring any expenses, inform the client in writing of its terms of business and in particular its terms in relation to replacement fees, advertising costs and expenses.
5. Offer a client only candidates who, as far as it can reasonably ascertain, have relevant experience for the job.

C. OFFER

1. Offer to a client only candidates who are interested in the job offered or where the candidate is put forward without prior discussion, the company believes in good faith, the candidate would be interested.
2. Tell the client whether or not the candidate has been interviewed.
3. Treat as confidential all information about a client and not release it or any part of it to third parties other than to candidates.
4. Not allow the relationship between its placement fees and candidates' salaries to influence its judgment when advising clients on salary levels.
5. Ensure that candidates are reimbursed only their reasonable expenses by the client.

D. ADVERTISING

1. Offer candidates any financial inducement, or inducement in kind, to reply to an advertisement, to attend an interview or to accept a job offer.
2. Use any misleading information in any advertisement.
3. Advise a job which does not exist.
4. Advise a job without the express permission of the client offering that job.

Knight

Contracts

Could you use 500 operators?

That's the number of operators we've got on our books at the moment. When you consider that we won't take anyone with less than 2½ years' experience, that's quite a team. So even if we picked you a team of Knight operators at random, you'd be sure of top calibre people. But we don't pick at random. Whether the job is for tomorrow or next month, regular or emergency, we make sure that every operator we send you has the right background for your type of hardware.

Sue Smyth, June Mogg and Jane Asbury will pick the operators you need. Call them now on 01-491 4706.

Programmers Immediate Contracts

RPGII Various locations - all machines.
VenteK Database programmer for London.
IBM - COBOL/BAU/PLI/RPGII/CICS.
ICL - 1900/2900 - COBOL.
FORTRAN - PLI/IBM/Data General.

This is just a selection from our current list. We have many contracts in all areas, so if you have at least 4 years' programming experience, phone Richard Kaluzynski or Sue Galloway on 01-491 4706 to find the one that's right for you.

Knight

Recruitment

Univac 90/60 Operators £3569 City

Successful, stable oil company subsidiary with expanding computer department needs two operators, preferably with Univac experience, to work a two- or three-shift week. Free lunches, good working conditions, and the prospect of promotion to Senior Operator.
Ref. AM0040 London

IBM 370/125 Operators £3733 Essex

Cosmetics company with a worldwide reputation and an IBM/125 under DOS/VS and POWER needs two young, bright operators to work a four-shift, 38 hour week. Real prospects for promotion to Shift Leader.
Ref. AM0042 London

New jobs, new opportunities in East London

Sheer success is the reason behind the recent re-organisation and expansion in our client's DP department. And that re-organisation could mean real success for the DP people who can develop and extend the already wide range of commercial applications which this manufacturing company uses. Hardware is an IBM 370 operating under DOS, with extensive use of teleprocessing. Our client now needs the following staff:-

Project Leader up to £6750 Systems Analysts up to £5950

To work in admin systems such as sales support and stock control. The ideal background is formal systems training, although experience alone will still carry a lot of weight. The Project Leader will ideally be a graduate, and the Analyst should ideally have an O & M background, and at least one major IBM-based project to his or her credit.

Senior Programmers up to £5750

To lead small programming teams in the development of database and other programmes for production control and admin systems. Our Client is looking for around four years' programming on IBM 370 machines, using PL1 (and perhaps Assembler) with ideally DBOMP. Ref. JP0029 London

Data Processing Manager

Location: South London

Income: In the range £8,000 to £10,000 per annum
Plus company car

Our client, one of the best-known public companies in the United Kingdom, has a range of products that are household names in the business world.

Based in South London, they now wish to recruit a Data Processing Manager to take charge of an already established Data Processing Department, and to take this department into 'the 1980s'. The initial tasks will be to ensure, a) that the department keeps running on a daily productive basis, and b) that thorough investigations are made into the development of new computer facilities within a two-year framework. These facilities could cover either a new Mainframe, a large Mini or a Computer Service Bureau.

Consequently, the person we are looking for will know his or her way round current computer technology. He or she will already have had a responsible position in computing, probably in Systems or Programming, and will be able to prove from past experience that he or she can control people and produce realistic recommendations to non-computer management with regard to hardware and systems development.

The position is not an easy one, and we are looking for someone with dynamism and confidence to greatly improve the performance of our client's installation. However, if this latter is achieved the rewards will be significant. Please apply to John Goldsmith quoting reference No. B58.

Are you at your best on a fast track?

Sprinters and long distance runners

It's all happening at Honeywell during the Year of the Tiger. Right now we need Systems Support Staff to help us implement our medium size series 80 business.

Systems Support is a vital and highly respected function at Honeywell. Clear thinking involvement on your part, and a flair for solving complex problems in our environment, could lead to considerable personal advancement.

We'll expect you to have a good programming background, COBOL, RPG II and/or assembler language; have multi-programming experience and be capable of carrying out high level systems implementations on medium size series 80 range.

You will be able to give practical assistance to customers in areas like:

Industry applications, database and communications.

Based at Holborn, Hemmings Mill, Croydon or Colchester, your salary will be above £6,000 but negotiable according to experience for top applicants. A company car or a car allowance is also offered.

If you're quick out of the starting blocks this is a fine opportunity to join a company that places a high premium on Systems Support.

Reply in strictest confidence to: Oick Robbottam or John Johnson Honeywell Information Systems Ltd, Kings House, 174 Hammarham Road, London W8 8SS. Tel: 01-749 4181

Honeywell

Cranfield Institute of Technology invites applications for appointment as

Programmer

in the Computer Centre which has an ICL 1903 computer with E05 60 looking store opening under GEORGE 2 and MAXIMOP.

The person appointed should have a working knowledge of FORTRAN and ALCOOL 8.8, preferably in an ICL environment. The job includes assisting users in an advisory capacity, package and general software development.

Salary will be on the scale £2804-£4811 (under review).

Further information and application form can be obtained from: The Secretary (Appointments) Cranfield Institute of Technology, Cranfield, Bedfordshire, MK43 0AL quoting reference 572/8 (closing date for applications 11 November 1977)

UNIVERSITY OF STRATHCLYDE Applications are invited for the post of

COMPUTER PROGRAMMER

in the MANAGEMENT SYSTEMS DIVISION of the University of Strathclyde.

The post will involve programming in COBOL for both new systems and the maintenance of existing systems. At present the University Administration operates a Honeywell 6840, 32K word data store, which provides both batch and interactive processing capability.

The appointment is particularly suited to a young person with graduate or college qualifications in Computer Science or with good experience of programming in a high level language.

The successful applicant will have the opportunity to work with an experienced team of experienced personnel utilizing a wide variety of modern equipment and techniques.

Salary scale £2,004 - £5,027 per annum on Grade 1A of National Salary Scales. 1976/77. Pension on the basis of 10% of salary plus 1% of pensionable earnings.

Applications should be sent to: The Secretary, University of Strathclyde, Glasgow G4 0LN, with three copies of CV and references.

Young Analyst/Programmer
Seeking Project Leader
promotion
London £4485-£5785 inc

The Electricity Council is the co-ordinating body for the electricity supply industry in England and Wales.

Our application systems are rather specialised, providing a wide range of information support services to our technical, research, statistical and other activities.

In this responsible position, you would design and implement new systems, supervise a small programming team and have close contact with our engineering staff.

Area Boards personnel and other professionals in-house and outside. We operate remote batch terminals online to a large central IBM 370/168.

These will be upgraded next year with a local processing capability and development facilities for interactive programs will be available.

Looking ahead, we would like you to be up-to-date with the latest computer technology and ready to take on a Project Leader role.

Duncan Ross,
Recruitment & Development Officer,
The Electricity Council,
30 Millbank, London SW1P 4RD.

ELECTRICITY COUNCIL

MYRIAD OPERATIONS Computer Personnel Consultants

OPERATIONS SUPERVISOR

CITY

c. £4500

A major American insurance organisation with interests world-wide, is able to offer an exciting opportunity for a person capable of demonstrating a progressive operations background. The demands of working under pressure in this developing installation will provide excellent experience for an ambitious man or woman.

To ensure the smooth day-to-day running of the operations department the successful applicant will be required to schedule all production work and test-shots with a view to obtaining the utmost efficiency from a small multi-programming machine. Supervisory capability will prove beneficial since the person appointed will be responsible for a team of operators, data-control clerks, and punch operators.

Applications are invited from candidates who now feel ready to accept additional responsibility and successfully run a very active installation. This is an outstanding opportunity which is further enhanced by excellent conditions of employment, and a comprehensive range of fringe benefits.

Please telephone for a confidential discussion or write:
30 Fleet Street London EC4Y 1AA
01-353 5868

Computer Operations Support Specialist

At Chrysler we believe our Company is going places. The development and imminent launch of our new small car — the Chrysler Sunbeam — together with our European Integration Plans signify great things for the future.

Our modern Computer Centre at Whitley, Coventry, serves the entire Chrysler organisation in England and Scotland. Equipment includes I.B.M. 370/168 and a 360/065 with a wide range of peripheral devices linking C.U.K. locations with the Computer Centre and to other locations in Europe.

We are looking for a candidate with an interest in solving operational problems and assisting Systems and Programming Personnel with Computer systems design. The ability to communicate effectively at all levels is, therefore, a vital requirement. Applicants for this senior position

should ideally have a background in both systems and operations and possess a thorough knowledge of I.B.M. OS, J.C.L. and utility programmes. Actual computer room experience together with the ability to write programmes in assembler language and COBOL would be added advantages.

Chrysler can offer you:

- a high level of job satisfaction
- excellent career prospects
- a competitive salary
- a pleasant working environment.

Fringe benefits include paid overtime, contributory pension scheme with free life assurance and discount on Company products. For further details please contact: Miss J.E. Meak, Recruitment Officer, Chrysler United Kingdom Limited, Abbey Road, Whitley, Coventry.

Senior Research Assistant
Applications are invited for a post of Senior Research Assistant in Computer Science, suitable for a period of three years from January 1, 1978. The person appointed will be required to carry out research into on-line multi-access information systems as part of a collaborative programme with the UK Atomic Energy Authority at Harwell. Applicants should have a first or second class honours degree in mathematics, computer science or related discipline and a sound training in computer programming. Experience of on-line information systems, modern data base techniques, interrogation languages or similar processing methods would be an advantage. The salary will be on a scale up to £4,180 per annum plus URS/LOSOP benefits. Further particulars and application forms (2 copies) may be obtained from the Personnel Officer, University College of Swansea, Singleton Park, Swansea, SA2 8PP. To whom they should be returned by Friday, November 11, 1977.

Real Time Programmers

System X is not the unknown. It's the name for the highly advanced telephone Switching System of the 1990's.

S.T.C. at New Southgate need programmers who will develop discrete parts of this New System, and who will have the capacity to grow with it.

If you have had Real Time Programming experience in e.g. Road/Air Traffic Control, Flight Simulation or Military Systems, and would like a change to Telecommunications, communicate with us.

The Division is situated on the outskirts of North London with easy access to Central London and rural Hertfordshire. We are part of a large well established and pleasantly situated location with all the facilities and amenities that this implies.

We offer competitive benefits and very real prospects of advancement for the right man or woman.

Telephone or Write to:
Mike Rendel (Department 32210),
Standard Telephones and Cables Limited,
Switching Main Exchange Products Division,
Oakleigh Road South, New Southgate, London N11 1HB.
01-368 1200 Ext. 3066.

Standard Telephones and Cables Limited
A British Company of I.T.T.

REAL TIME MINI

That was great!
More please — up to £9k

Last time we put out feelers for Real Time Mini-orientated programmers and analysts — and it was only a few weeks ago — we thought we were getting enough to keep us happy for months.

But no. We have already exhausted the lot.

And, as fast as we place them, we get asked for more. By manufacturers, consultants and users all over — not only in London, but also elsewhere in the UK and abroad.

We're aware that you may have your mind on a Christmas bonus that you won't get if you leave where you are right away. But don't give it another thought. Invariably what we have to offer more than makes up for little things like that.

Examples — just examples — of what we've got going for you now:

BERKS £3,500-£9,000

Prog — Mini, Commercial, Assembler and On-Line 18 months + exp. — Ferranti Argus 700, experience of Coral 2 years + exp. — Fortran for commercial applications. — PDP11/70 + RSK 1M + Fortran IV, ideally Cobol and Real Time.

Prog/Cons — Applications systems work, Algol Coral, Assembler or Interdata 32. — With Data General Experience to work in Basic.

Project Leaders — Senior DP people to work as Project Leaders or on Pre Sales Work.

SURREY to £6,200

Sen Prog/Anal — With software experience in work on a number of varied and wide ranging projects and activities with Technical Operations.

Engineers — Mini Computer Design Engineers, with an appreciation of the commercial aspects of the industry, and an ability to handle Project Engineering and Management would be an advantage.

HANTS £4,800

Prog/Anal — With Mini Commercial experience.

LONDON

Vacancies exist in London for all the above type people, plus people with experience of: Process Control, Message Switching, Communications, Word Processing, Flight Simulation, Banking, Technical, Scientific or Commercial. In fact if you have any type of Real Time Mini experience just call us.

P.S. Vacancies exist in all Home Counties.

As we said, just examples. There are lots more. Just dial 01-636 6073 or 01-323 2793, and ask for Beryl McLaren.

COMPUTER APPOINTMENTS RECRUITMENT
79 Great Titchfield Street, London W1

SIEMENS

Computer Service Engineers

Our extensive Product Training can assure your future

As part of one of the world's leading electrical and electronics organisations we have become market leaders in data and information systems which are the result of original research and development.

Our Service Division with its brand new facilities at Sunbury-on-Thames now needs comprehensively experienced engineers with broad based knowledge of process computers and related peripheral equipment.

You will be responsible for servicing various systems throughout the UK and will be expected to take advantage of extensive product training in both England and Germany.

Aged 24+ and educated up to HNC Electronics standard you will have the opportunity to progress within our expanding organisation.

The starting salary is excellent and benefits include 4 weeks holiday and a non-contributory pension plus an attractive car scheme.

Please write to telephone Ray Parke, Recruitment Officer, Siemens Limited, Siemens House, Windmill Road, Sunbury-on-Thames, Middlesex UB8 3PH.

Management Services

Our Management Services Department works on a wide range of computer systems assignments operating within multi-disciplinary project teams. Each team is totally responsible for the project from its initial user investigations through to computer systems specification and final implementation.

We now wish to strengthen the Department and should like to hear from applicants (male/female) who either have a record of successful commercial systems design and implementation or wish to extend their existing computer experience. Enthusiasm and the ability to communicate at all levels is essential, plus a willingness to travel and, on occasions, stay away from home.

The salary is negotiable, based on experience and the ability to make an immediate contribution, and benefits include free life insurance and contributory pension scheme. A Company car will be provided for the senior posts.

Applicants should write, giving full personal and career details to:

Mrs. D.M. Rowe,
Recruitment and Training Officer,
Tarmac Roadstone Holdings Limited,
Roadstone House, 50 Waterloo Road,
Wolverhampton.

Computer People Midlands

— a new VLI company, based in Birmingham, for
Contract Programmers & Analysts

We're bringing VLI professionalism to contract staffing in the Midlands.

If you're interested in contract work in the Midlands—come to us.

We have interesting contract assignments with major clients throughout the region.

If you've previously registered for Midlands assignments with our sister company Computer People North, your details will already have been transferred to us—but give us a call to see what's going.

We pay top rates to high-calibre, professional computer people—as much as £260 p.w. according to suitability and experience.

Special urgency for IBM OS or DOS, COBOL or PL1. Programmers and Analysts—programmers—but other requirements coming in daily.

PLUS all the benefits of the 'People Package': including free sick pay scheme and holiday pay.

Phone us today for information about contracts and to register your details.
Or fill in the coupon and we'll send you the 'People Package' particulars and a registration form.

QUADRANT RECRUITMENT

PROGRAMMING SUPERVISOR

S. MANCHESTER £5,000 - £5,750

Our client, an engineering company in the South Manchester area, runs an IBM 370/115 under DOS/VS with both financial and production applications.

A programming supervisor is required to take responsibility for all aspects of the work of a small programming section and is also expected to work closely with systems analysts on future project development.

Applicants must have an in-depth knowledge of COBOL and whilst some experience of database and on-line techniques would be preferred, it is not essential.

The successful applicant, who will report to the data processing manager, will be offered a starting salary in line with his/her experience, and attractive relocation package.

Initial interviews can be held in Manchester, Sheffield or London.

Ashley House, Ashley Road, Altrincham, WA14 2DB

AUSTRALIA EDP CAREER OPPORTUNITIES £8,000-£14,300

Oetec is Australia's largest and oldest independent software house specialising in customised computer applications. In 11 years of operation we have grown to some 110 professional staff in Sydney, Melbourne, Brisbane, Canberra, Perth and Adelaide.

The positions available are for programmers, analyst programmers (range £8,000-£11,000), technical specialists, project leaders and consultants (range £11,000-£14,300). In order to obtain a visa, at least three years' continuous experience in EDP is necessary.

Oetec requires applicants to have a high level of expertise in one or more of the following:-

- Applications programming
- Systems analysis and design
- Machine house systems support
- Database systems
- Project management
- Commercial mini-systems
- EDP consulting
- Communications/on-line systems

CAREER OPPORTUNITIES

The company operates in all areas of commercial applications - consulting, systems design and programming, on mainframes as well as commercial minis, operates a small turnkey bureau and EDP training. The expansion of business in EDP consulting, plus the high professional reputation of the company has led to vacancies in all five States of Australia.

Our founder and Managing Director will be visiting London to interview prospective candidates. Enquiries from Australians interested in returning home are also welcome. Send a brief resume (including a day and evening phone No.) to Mr. H. Douglas C/O Bertlett Jeffries Advertising Ltd, 25/28 Fleet Street, London EC4Y 1NE, to arrive by November 7th.

Computer Operations

We are a successful and well established remote access and timesharing bureau, with a large country wide network, and an overseas operation. We require Operators and Data Controllers at various levels to work with advanced equipment in our modern computer operations centre in Epsom.

Atkins Computing

We offer appropriate training and advancement to shift leader grades for those who possess the relevant experience, are willing to accept increased responsibility and have the urge to progress through the Company.

We offer the employee benefits associated with a leading professional organisation including staff bar and restaurant and sports and social club facilities. Interested? Then write giving brief personal and career details to Mike Warren, Senior Personnel Officer, Atkins Computing Services Limited, Woodcote Grove, Ashley Road, Epsom, Surrey KT18 5BW or telephone Epsom 26140, extension 2444.

Programming Manager

N.W. London

Salary Negotiable

The company is a market leader in its specialised engineering field with excellent growth prospects and an extremely impressive export record. Diversification across the market area and abroad, coupled with technical innovation, has led to several Queen's Awards to Industry. In DP, both hardware and software are being significantly enhanced with a larger IBM 370 system, CICS, DL/1 and both in-house and remote terminals.

Technical strengths and ability alone are not sufficient; the position requires a good man manager. Previous management or at least team leading or supervisory experience is required. The person appointed will be expected to be capable of formulating and implementing policy for the programming area including the investigation of new programming techniques and the definition of standards. Naturally a high level of technical expertise is also expected; the use of COBOL in a DOS/VS environment, familiarity with CICS/VS and DL/1 and preferably ability with other languages such as ASSEMBLER and PL/1.

The company offers an excellent basic salary, a bonus scheme, company pension scheme and other fringe benefits associated with a major organisation. There is a large car park and excellent public transport facilities. For further details write or telephone our CROYDON office quoting ref: CVW59-7J.

MIDLAND ROAD CONSTRUCTION UNIT
HEADQUARTERS

Programmer

SO 1/2 (£4,238 - £4,982) plus Supplementary Allowances - Post No 27

Assistant Programmer

AP 4/5 (£3,385 - £4,085) plus Supplementary Allowances - Post No 40

Applications are invited for the above vacancies at the Headquarters of the Midland Road Construction Unit in Leamington Spa. The Unit is responsible for Motorway and Trunk Road projects for 8 Midland Counties and the successful applicants will join a team working on interesting applications in the field of highway engineering.

Systems analysts would form a vital part of the work and applicants should possess an appropriate qualification and have good experience of I.B.M. 360/370 machines under O.S. and should be fluent in Fortran. Experience in P.L/1 and Assembler would be an advantage. The persons appointed should also have experience in highway design by computer but candidates with experience in other disciplines will be considered.

The appointment will be on the permanent staff of the Warwickshire County Council and will be subject to the National Conditions of Service, the Local Government Superannuation Acts and the production of a satisfactory Medical Certificate. The person appointed will be on permanent secondment to the Department of Transport.

Application forms can be obtained from the Director, Midland Road Construction Unit, Brandon House, 82-84, Holly Walk, Leamington Spa to whom they should be returned by not later than Friday the 4th November 1977.

Job No 10/9

JBA**Consultant**

London circa £9,000
A consultant is required to join a busy team primarily engaged on city assignments. Candidates will have a sound d.p. background with particular emphasis on financial applications, say, Banking, Insurance and Stockbroking. Additionally, the key function will be client liaison, therefore applicants must be personable and have the ability to communicate effectively with senior management. This is an excellent opportunity to work for a reputable consultancy organisation and to make a significant contribution to the company's growth. A substantial starting salary will be paid to attract high calibre candidates.

Contact: Margaret Stevens

Systems Analysts

Kent/Essex up to £5,950
Our client, a well known manufacturing company, offer exceptional systems development work and progression into project leader positions. Ideally, candidates should have a background in production control, sales administration, stock control, or accounting. Consideration will be given to relatively junior analysts and senior programmers wishing to make the move into analysis.

Interesting, varied work at excellent salaries.

Contact: Mike Creamer

Junior Systems Analysts

Central London circa £5,000
A large retail organisation now requires additional development staff in their merchandising section. Candidates must have had some formal training in analysis and at least two years programming experience, ideally in COBOL. Programmers wishing to progress into analysis are invited to apply as trainees. IBM experience is particularly desirable but not essential.

Convenient location, excellent salaries, great prospects.

Contact: Mike Creamer

For further information on any of the above vacancies please contact the appropriate consultant. If your qualifications do not match the above positions but you are seeking other opportunities please contact us anyway.

JAMES BAKER ASSOCIATES

International Personnel Consultants

16 Maddox Street, London W.1. Tel: 01-491 4478

Process Control

London & NW. up to £8,500
Our client, a well established name in the process control and automation industry, has opportunities for engineers with a software background to join their development teams.

Candidates must have several years experience in programming preferably in FORTRAN, CORAL, RTI/2 or ASSEMBLER and be able to demonstrate a sound background of industrial control systems. Salaries and fringe benefits are above average with the opportunity for advancement and travel.

Contact: Jim Baker

Analyst/Programmers

West of London neg. circa £8,000
Applications are invited from those who can make an immediate contribution in a demanding technical role. Essentially you d.p. experience should have covered a broad spectrum of commercial or manufacturing applications, and a thorough knowledge of an Assembler level language. Specialist skills, such as real-time development on minicomputers will be highly valued. You will be working on possibly the most advanced manufacturing control system outside the U.S.A.

The client is looking for well educated people, with out-going personalities, who have the ability to document clearly and to work well under pressure. These positions offer a varied and challenging working environment and the opportunity for the ambitious programmer to join a small but highly professional team.

Contact: Margaret Stevens

Programmers

Surry c. £4,000
A large international finance organisation has vacancies for Programmers to work on sophisticated real-time and teleprocessing systems.

Applicants must have at least six months experience of a high level language, such as COBOL, PL/I or BASIC, in a commercial environment. An extensive training programme is available.

Salaries negotiable according to experience. Excellent fringe benefits.

Contact: Jim Baker

Real Time Computing in The Health Service

At the North Staffs Hospital Centre we have vacancies in the exciting area of hospital management systems. We employ an I.C.L. based computer network with over 100 terminals in real time running 24 hours a day. Many of the applications are pioneering and employ innovative real time techniques.

We require the following staff:

SENIOR SYSTEMS ANALYST

Scale 14 £4838 - £5813 + £312 + 5% (maximum £208) supplements.

SYSTEMS ANALYST

Starting scale 4 £3534 - £4344 with prospect of promotion up to £4983 + £312 + 5% (maximum £208) supplements.

Both posts require at least 5 years in-depth programming and systems experience. The Senior Analyst will be capable of leading multi-disciplinary teams in successful implementation. Much of his/her work will consist of

user liaison.

PROGRAMMER/TRAINEE PROGRAMMER

Programmers start at £2581 to £3534 + supplements. Trainees start at £2181 to £2581 + supplements. Future advancement, commanding salaries up to £4983 will depend on ability and experience gained.

The successful programmer will be working in an advanced multi-processor real time environment, using I.C.L. and Data General equipment, with both high and low level languages where our professional approach ensures the highest standards.

For further particulars and/or an application form please apply to the Director of Computing Service, North Staffordshire Royal Infirmary, Princes Road, Hartshill, Stoke-on-Trent ST4 7JN. Telephone Stoke-on-Trent 49144 ext. 4540.

North Staffordshire Health District, Staffordshire Area Health Authority

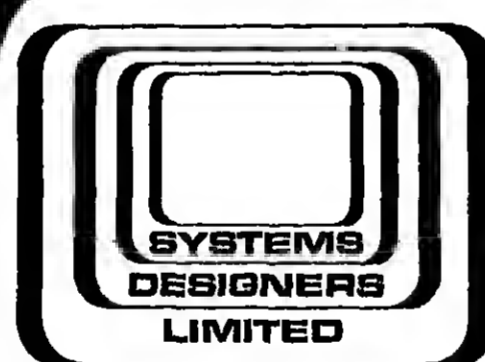

Carlsberg**OPERATIONS CONTROLLER**

We are looking for an Operations Controller with some systems analysis experience to assist in the day-to-day running of a small ICL 2903 installation.

It will be necessary as part of the duties to operate the computer and Direct Date Entry equipment.

The successful applicant will be aged 25 to 30 and have several years' experience of DCL techniques.

Please apply in writing to: Personnel Department, Carlsberg Brewery Limited, P.O. Box 46, 140 Bridge Street, Northampton NN1 1PZ.

**ADVANCED COMPUTING SYSTEMS**

PROGRAMMERS AND SYSTEMS ENGINEERS UP TO £6,500

Systems Designers Limited is a leading, independent, British systems consultancy specialising in mini and micro computer applications.

Growing demand for our high quality services has created a full order book, with exciting opportunities for top programmers and systems engineers.

Current projects are challenging and rewarding, while rapid progress is possible for top people. Company policy of full participation and involvement of all members has resulted in a dynamic environment and wide career challenge.

Head office is in Frimley, Surrey, and we have a nearby centre for producing turnkey systems. We are a private company, with substantial financial backing. Excellent benefits and working conditions include profit sharing, optional BUPA and pension scheme, and a lively Sports and Social Club. Assistance is given with removal where necessary.

Opportunities will occur for those interested in working in Europe.

REAL-TIME SYSTEMS

Important Government and industrial projects have created challenging opportunities for people skilled in the design and implementation of real-time mini and micro computer systems.

Please write to or telephone Bill Hockley, Systems Manager, at Systems House, 57-61 High Street, Frimley, Surrey GU16 5HJ. Telephone: Camberley 102761/8347.

Requirements exist in all areas including communications systems, advanced military systems and industrial process control.

We are interested in hearing from programmers and systems engineers at all levels. Applicants must have at least one year's experience, good academic qualifications and proven software ability, together with a professional outlook.

ADVANCED SOFTWARE

We are deeply involved in compiler technology, real-time language specification, and research into multi-processor systems. We are keen to meet software specialists with sound experience in these areas who can contribute to our reputation and capability.

**SALES EXECUTIVES
TIMESHARING SERVICES

BELGIUM (Brussels and Antwerp) Circa B.Fr 1 Million
U.K. (London) Circa £10,000
(SPLIT 70% BASIC, 30% COMMISSION PLUS COMPANY CAR)

Our Clients are the World's largest independent firm in Information sciences and continue to grow at a phenomenal rate. They now employ over 8,400 personnel worldwide and had a turnover in excess of £24 Million in their last financial year.

Services offered by the company include systems programming, application programs, requirements analysis and systems design, facilities management, communications systems, systems engineering, software products, educational services, government and industrial systems and information network services.

We have been asked to identify suitable candidates to fill a number of vacancies for salesmen in Europe and the U.K. They will be selling the company's timesharing services, primarily for financial applications and as such, should have a good knowledge of the timesharing market-place in their particular country. Applicants should preferably be nationals and total fluency in the country's language is essential.

These are exciting and rewarding opportunities to join one of the fastest growing companies in the computer industry today. An excellent future is assured for any salesman who can show the ability to achieve targets and develop new accounts.

Interested applicants should telephone the Advising Consultant and interviews will be arranged in the relevant countries towards the end of October.

PROGRAMMERS

In the following major areas:

1. **HARDWARE TEST SUPPORT** to aid the preparation of software proving a mini computer system. The tests will be written in a real time variant of PL/I. Programme production will be undertaken on an IBM 370/168 configuration under OS/MVS using TSO. Some mini experience in a real time environment would be helpful as would a knowledge of ASSEMBLER. (Ref. DCO/41077A)

2. **INTEGRATION TEST PREPARATION** (mini based). General knowledge of mini applications in a real time environment (ideally familiar with C11/C1MSA) able to debug at machine level on a teletype. Programs written in a real time variant of PL/I. Experience of working under pressure is essential. We require practical individuals with the ability to apply ideas and to get a Computing systems up and running with minimum delay. (Ref. DCO/41077B)

3. **INTEGRATION TEST PREPARATION** (on host IBM mainframe) required up to date IBM JCL experience preferably on a 370/168 with MVS running TSO. A knowledge of PL/I together with some experience of mini computers would be desirable. (Ref. DCO/41077C)

4. **SOFTWARE SUPPORT** to aid in preparation of software (written in mini ASSEMBLER) to input data from special peripherals - familiarity with a mini computer ASSEMBLER language in a real time environment is essential. Some exposure to FORTRAN and IBM JCL is desirable. (Ref. DCO/41077D)

c. £12,000 p.a.

HOLLAND

SYSTEMS ANALYST

age 30+ should have several years' real-time process/plant control and STRONG PROGRAMMING background using PDP11's, RSX11M and FORTRAN experience required. POP assembler and esset. (Ref. BJ9877)

c. £8,800 p.a.

FRANCE

TECHNICAL AUTHORS

(PARTS)

A number of authors are required for a major publications development project. A strong background in DP is essential for these positions and knowledge of the following subjects would be particularly relevant.

- Data base management
- JCL
- Communications Software
- Interactive and RJE systems
- Programming languages COBOL, FORTRAN or RPG2

(Ref. DECO/01087)

£8,000 p.a.

FRANCE

PROGRAMMER

Mini computer programmer with knowledge of photo typesetting and use of intelligent terminals required for project in Paris. (Ref. DCO/25077)

The Growth Company

It is through continuing growth that new and expanding career opportunities are created. With particular emphasis overseas, many new openings have been created in Logica's Management Systems Group. We confidently expect to increase both the number of clients and the geographical spread. Our clients in the United States, New Zealand, Norway, Libya, Singapore and Finland include some of the world's largest and most successful banks, companies and organisations. They rely on Logica's services because of our international reputation in:-

Turnkey implementation of commercial systems
Many of our projects are based on mini-computers, and our reputation is particularly high in the development of banking systems. At the heart of many of these projects is our TRADER foreign exchange product.

Development of systems software
The diversity of projects covers:-
the production of total systems with novel graphics and communications content
creation of high-performance software environments to support reliable transaction-based systems
supply of language compilers and low level software for mini, micro and mainframe equipment

Consultancy to top management on future computer policies
We specialise in:-
computer performance management, based on the use of hardware and software measurement and the advanced simulation techniques
requirements analysis and system selection
planning the exploitation of distributed processing techniques.

Our considerable success means that we urgently need experienced people who feel they can contribute to these exciting opportunities. We want professionals with initiative who will welcome responsibility and some opportunity for overseas assignments.

Call Margaret Neagle, the Group Personnel Officer on 01-837 9111 to discuss these opportunities with Management Systems Group managers or send your career summary using Freepost and quoting the reference appropriate to your area of interest to:

Logica Limited

Project Managers
£6500-£9500
Ref. MS/2/BS1
With at least 8 years in DP and a successful track record in managing technically challenging projects to timescale and budget are essential; proven ability to motivate people and to communicate successfully with top management is important. Specialist skills in one or more of the following areas:-
minicomputer implementation
banking and finance
text processing systems
would be an advantage.

Software Designers
£5000-£7000
Ref. MS/2/SS
To design total systems with novel and demanding software requirements. Also to design special software environments as a base for our commercial systems. A thorough knowledge of computer architecture and state-of-the-art software techniques is essential preferably based on more than one machine. Experience of minicomputer and communications software is particularly relevant.

Banking Analysts
£5500-£6500
Ref. MS/2/BS2
We need senior and junior analysts with a minimum of 2-3 years experience of banking systems, preferably in the implementation of branch accounting or foreign exchange systems. A detailed knowledge of operations involved in both front-office and back-office procedures is essential.

Consultants
£5500-£9500
Ref. MS/2/DPE1
We need experienced professionals who have a broad base of commercial DP experience with users or computer manufacturers. Some management experience will be an asset. The ability to use sound technical knowledge in the formulation of business judgements for clients and to be able to communicate effectively with all levels of management is essential.

Performance Analysts
£3800-£9800
Ref. MS/2/DPE2
Experience in the use of performance measurement and simulation techniques allied with a thorough knowledge of either IBM 370 or JCL 1800 and 2800 hardware and software capabilities is essential.

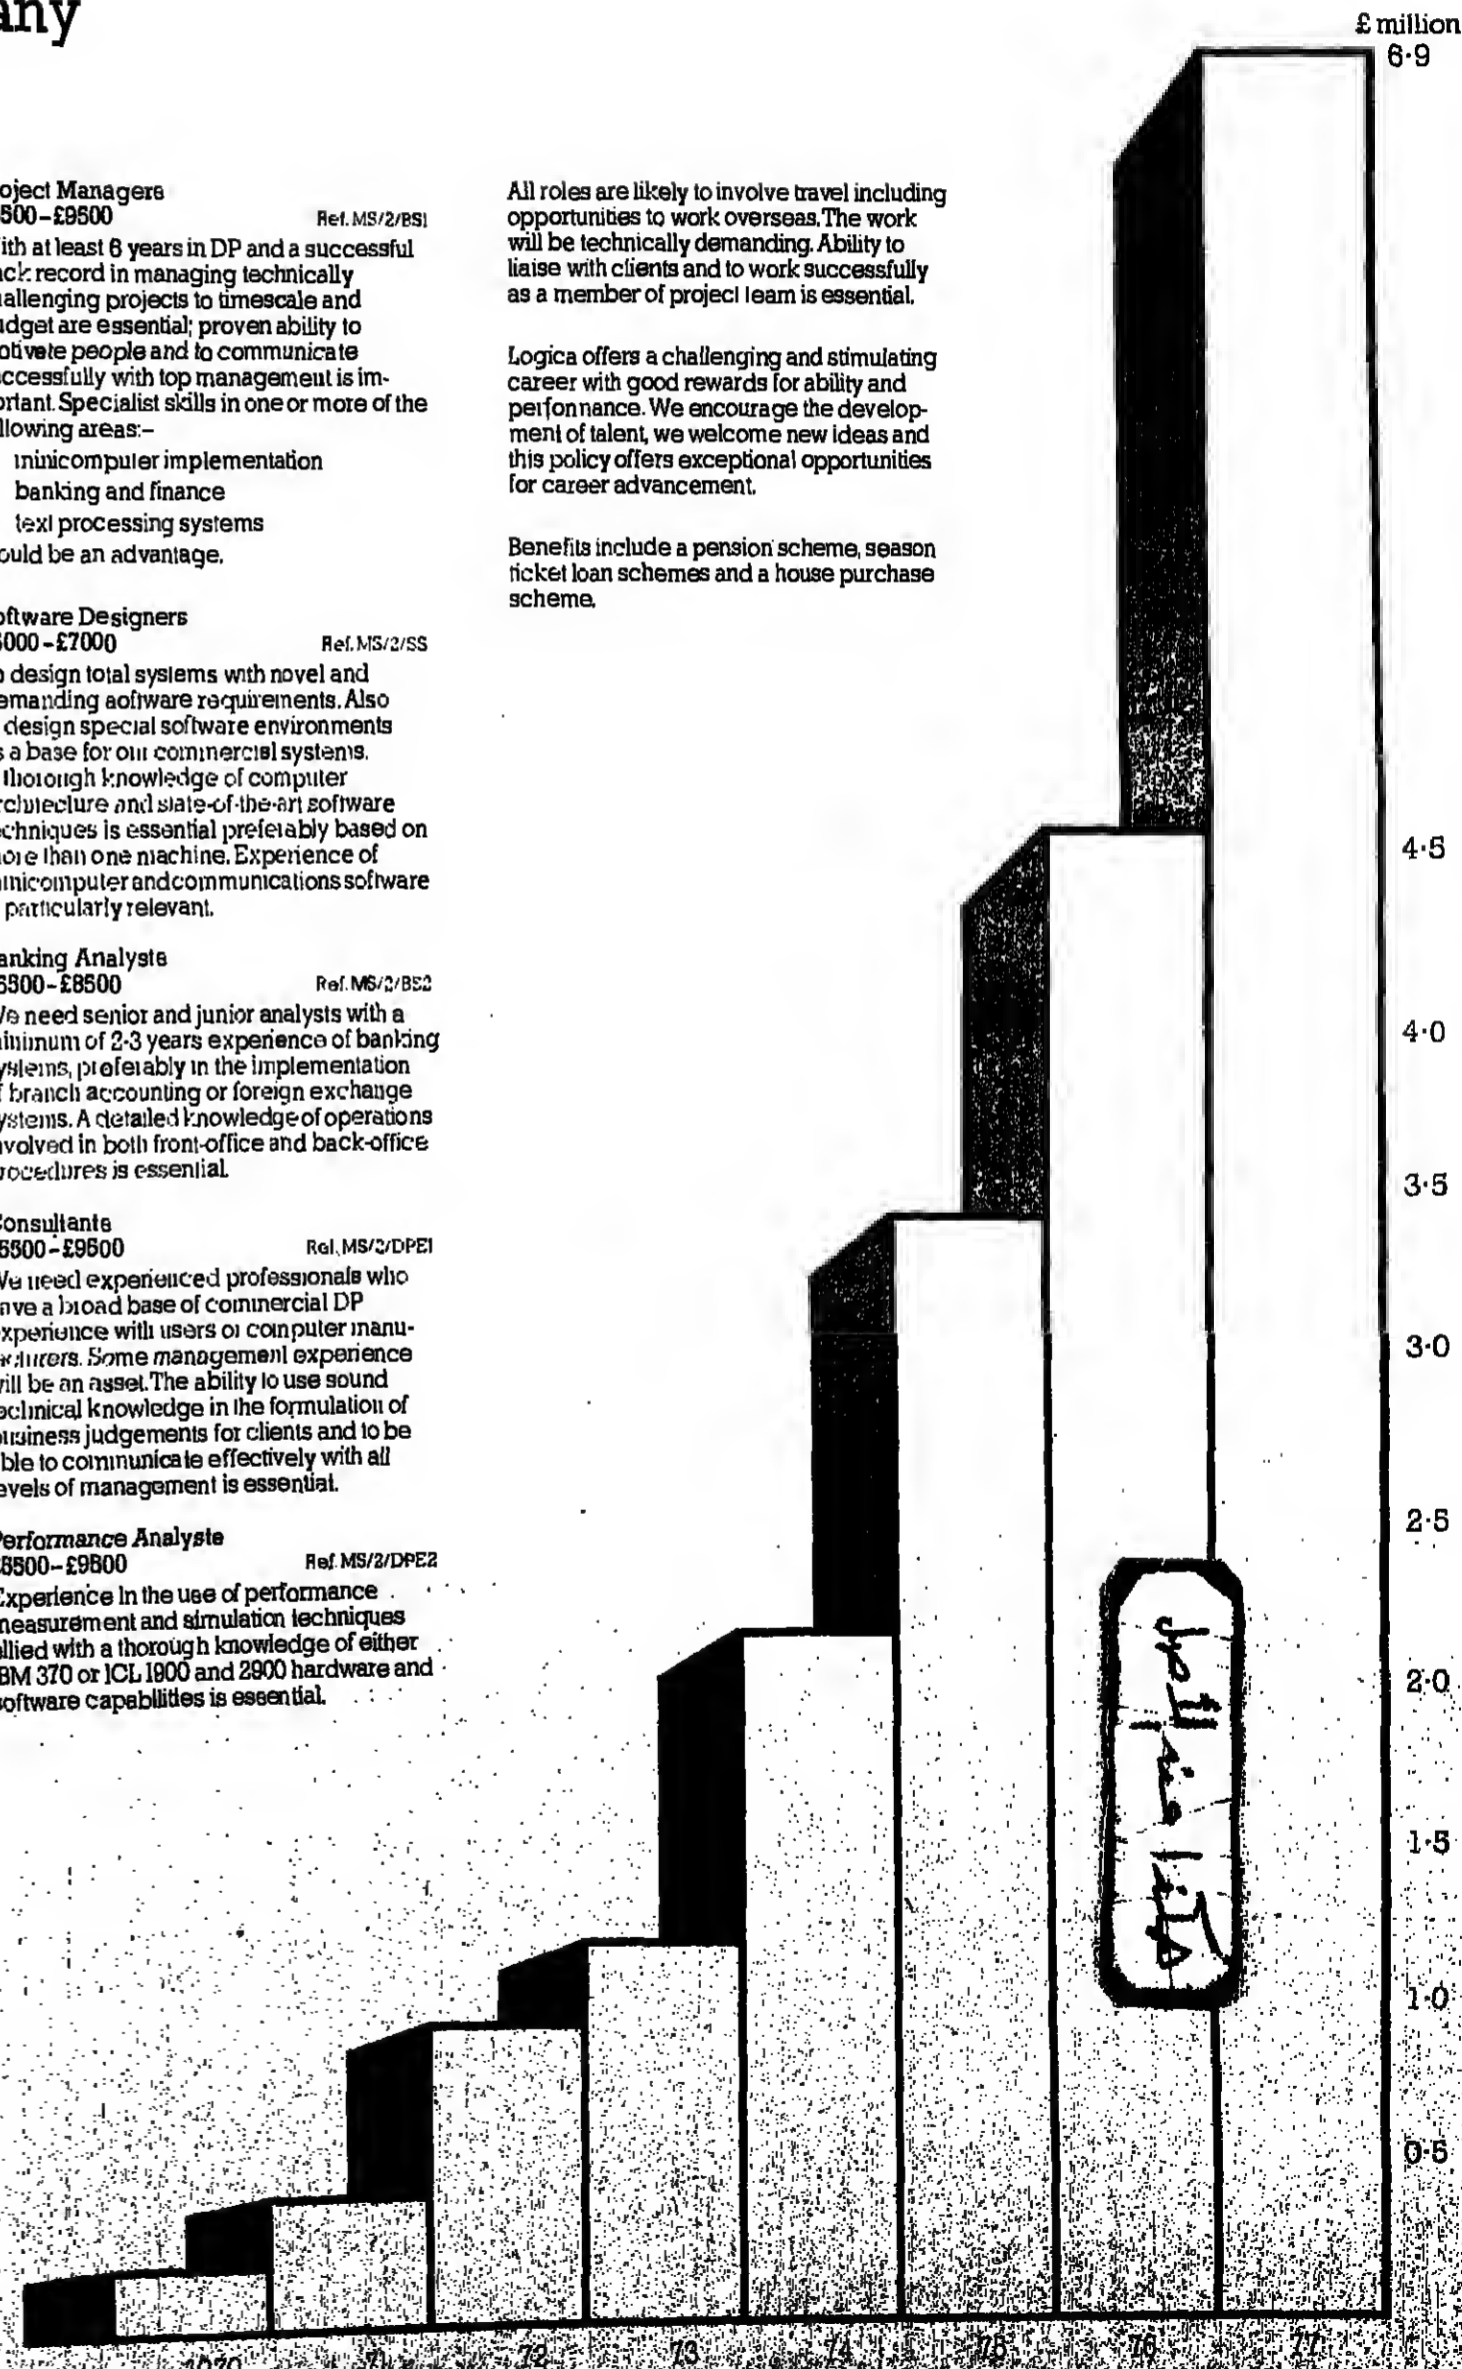

Logica
growth
revenue

£ million
6-9

All roles are likely to involve travel including opportunities to work overseas. The work will be technically demanding. Ability to liaise with clients and to work successfully as a member of project team is essential.

Logica offers a challenging and stimulating career with good rewards for ability and performance. We encourage the development of talent, we welcome new ideas and this policy offers exceptional opportunities for career advancement.

Benefits include a pension scheme, season ticket loan schemes and a house purchase scheme.

SOUTH BIRMINGHAM PROGRAMMER/ANALYSTS SALARY c£4,400 P.A.

We have been retained by our clients, a large distribution concern, to recruit experienced PROGRAMMERS who have a sound knowledge of SYSTEMS within a commercial environment. The successful candidate will work as part of a small, friendly team and be housed in a modern, award winning building.

Successful applicants should:-

- * be fluent in COBOL, preferably but not essentially Honeywell
- * have a minimum of two years' commercial programming experience, ideally with some systems experience
- * be of mature personality.

Normal large company benefits apply including discounts on all products and heavily subsidised meal facilities.

Interested candidates should contact without delay:-

ANDREW CARTER 021-236 3781 REF. NO. CW/10/10

SOFTWARE SALES Northern Home Counties & London to: 8K + CAR + super benefits

Our Client is a privately owned Company which supports and sells an integrated series of products. These products enjoy acceptance in many major main-frame installations, and are generally regarded as being the most complete and best supported in their particular application areas.

THE COMPANY IS GROWING DRAMATICALLY, AND THIS IS A NEW SALES TERRITORY. THE POSITION WILL APPEAL TO A SYSTEMS/ENGINEER TYPE OF PERSON WHO IS SEEKING A DIRECT SALES ROLE.

Candidates must have:

- * a sound technical background from within a main-frame environment, with ideally, a knowledge of 370 or 1900 hardware
- * if not sound direct sales experience within a data processing environment, then the correct personal motivation, presence and attitude to succeed in such a job.

This is an unusual opportunity to move into direct sales from a technically biased background. The Company is a much enlightened employer, and offers an exceptional employment package.

PROGRAMMERS BUCKS £6 1/2 K

The success of this software house is all down to the high calibre staff they recruit, and is reflected in the generous salary and profit sharing incentives offered. They undertake commercial applications in the Greater London and Buckinghamshire areas. These include the development and implementation of mini and mainframe systems. If you have mini experience and are conversant in FORTRAN, BASIC, or ASSEMBLER or have IBM M/F experience in IMS, CICS and have used COBOL, PL1 or ASSEMBLER then give us a ring.

Contact Pam Quinlan

ENGINEERS to £4 1/2 K SCOTLAND

A well respected established company has recently created two new roles within its expanding communications department. The microwave engineer will specify systems according to customer requirements - a pre-sales role. Relevant design experience is therefore required, and preferably a degree or similar qualification in electronics. The technical documentation engineer will liaise with test engineers and correlate their findings to produce reference and sales information. Experience in the data transmission field is essential, supported by an HNC. Both positions require good communication skills with initiative for this stimulating but demanding environment. Relocation expenses are available where applicable.

Contact Peter Gorton

SALES support Neg. c £5 1/2 K W. LONDON based + car allowance + bonus

If you can honestly answer yes to the following questions, our client would like to hear more about you.

- * Able to communicate confidently and effectively at all levels.
- * Can work under pressure in a competitive environment.
- * Have experience in business commercial applications.
- * Flexible, adaptable and able to accept responsibility.

The successful candidate will be the computer pre and post sales support specialist responsible for new business clients in Greater London. He will of course have a solid computer background. Prospects within this expanding organisation are excellent, especially for the ambitious.

Contact Rowland Middleton

ANAL/PROGS to £6K S. LONDON

Suitable applicants for these very attractive positions should have at least 2 years experience in COBOL programming and at least 2 years in system analysis. Personality, intelligence and a professional attitude are as important as the relevant experience, and preference will be given to applicants with a financial or general insurance background.

This multi national company is in the process of installing a 370/115 with T.P. equipment and offers plenty of scope for career development within its enterprising organisation.

Kenya

Kenya Airways offer the following challenging opportunities at its data processing centre in Nairobi. The provision of a complete management information service is the long term aim and recent and current developments include wagon, stock, accounting and personnel systems.

Systems Analyst/ Senior Systems Analyst

To be responsible for the design, specification and implementation of systems for an ICL 1900 computer.

Senior Programmer

Required for the programming in PLAN and COBOL for ICL 1904E and 1905F computers.

(MC/128/CD)

Candidates, aged up to 45, must be educated to 'A' level standard and have at least 4 years relevant experience. A degree or professional qualification would be an advantage. Salaries, which include a substantial tax-free allowance paid under Britain's overseas aid programme, are equivalent to £3000 - £3250 per year for the Systems Analyst, and £4500 - £5370 per year for the Senior Programmer. Basic salary attracts 45% gratuity.

Benefits for both posts include free passages, generous paid leave, children's holiday visit passages and education allowances, subsidised housing, appointment grant and interest-free car loan.

The terms on which civil and public servants may be released if selected for appointment will be subject to agreement with their present employers.

INTERNATIONAL BANKING

We are a major American Bank long established in London. Presently we are expanding our activities worldwide and particularly in Europe. Major data processing projects are currently being developed and more are planned, based mainly on IBM 370 and SYSTEM 3 COMPUTERS.

As a result of this activity we are expanding our International EDP Audit team and can provide excellent career opportunities for the following:

PROJECT LEADER - AUDIT SOFTWARE

To lead a small team developing audit software for IBM 370 and SYSTEM 3 banking systems. Candidates should have had project leadership experience, preferably with an IBM 370 system. Knowledge of SYSTEM 3 an advantage.

IBM 370 PROGRAMMER

Experienced in Assembler and COBOL. Good knowledge of DOS/VS important. Knowledge of IBM software and teleprocessing experience an advantage.

Both successful applicants will be involved initially with audit software development, and will eventually participate in all aspects of EOP auditing. Occasional European travel will be required.

An excellent salary will be offered for these positions, together with the usual benefits associated with a first-class bank.

Candidates, male or female, who meet the above requirements should identify the position for which they are applying and send full details of their age, education, experience and current salary to Box No. RD 4279, o/o. Extel Advertising & PR Limited, Pemberton House, East Harding Street, London EC4A 3JD. The names of any banks to whom you do not wish your application forwarded should be printed clearly on the back of the envelope.

Move out and move up

If you're interested in developing your career with a progressive, expanding, computer oriented company you should consider the advantages of a move to Qanton Hazell. As market leaders in the growing replacement motor component industry, we can offer you the chance of sound career development within a major international group, allied to the advantages - environmental and economic - of a beautiful North Wales coastal resort.

Don't assume that, because we are where we are, the work will be any less demanding than similar positions in major centres - it will demand an approach as professional and dedicated as any city centre outfit. Our Systems Services Department provides vital support in the manufacturing, wholesaling and retailing aspects of our business through a national network of terminals linked to a 192K 1904S. We're heavily committed to the development of new projects and we're now looking to strengthen our team with keen men and women who want to grow with an expanding organisation.

Project Leaders to £6500. To lead teams of analysts in the preparation of commercial systems specifications. Must have considerable project experience and some supervisory experience. A background in leading multi-discipline project teams would be an advantage. Late 20's/early 30's.

Senior O.R. Analyst c. £5500. O.R. Analyst c. £4600. Providing specialist skills to multi-discipline teams and occasionally leading specialist project teams, controlling and planning the use of O.R. resources. For the Senior post, experience of inventory and distribution systems is desirable.

Operations Analyst c. £4600. To be part of the Operations Planning Group, handling computer evaluation studies and providing an information and planning service for the day to day running of computer operations. Applicant should have thorough ICL experience on one or more of the following: GEORGE 3 OPERATING SYSTEM, COBOL PROGRAMMING, OPERATIONS ANALYSIS.

Systems Analyst and Systems Designers c. £4600. For both production and commercial projects. A minimum of two years in a O.P. discipline, provided they display the necessary motivation and temperament. Designers should have good programming experience.

Systems Analyst. To work in the above areas. Currently earning over £3500.

An excellent range of fringe benefits includes generous assistance with relocation for an application form, please write or telephone

Terry Brown, Personnel Manager, Qanton Hazell Ltd, Colwyn Bay, North Wales
Tel: Colwyn Bay 44294

AUSTRALIA

EDP MARKETING
OPPORTUNITIES £16,300-£22,700

Dattec is Australia's largest and oldest independent software house specialising in customised computer applications.

In 11 years of operation we have grown to some 110 professional staff in Sydney, Melbourne, Brisbane, Canberra, Perth and Adelaide.

Six Marketing Positions

1. Corporate Marketing Manager - Now products and services to identify, research and introduce new products and services to this Computer Services Organisation. This is a senior appointment reporting to the Managing Director, and applicants should have experience in the following areas:
- Hardware or Software sales
- Market Research
- Public Relations and Advertising
Location, Sydney.

2. N.S.W. Sales Manager
Although customised computer consultancy is well developed in Australia, contract work as it is practised in the UK is in its early stages. We are especially looking for an experienced professional in the people contracting field. The right person is currently holding a senior management or sales position with one of the top UK software/people contracting companies.

3. Software Products Sales Manager
This job involves a number of software products, including commercial applications, database and general purpose systems. We wish to recruit an experienced software products salesman to sell and support these products. He will be supported by a software products group and by our consulting division. The successful applicant will have had extensive experience in selling commercial applications, packages and will be able to demonstrate a successful track record in negotiating, closing and quota performance. A successful MARK IV salesman would be of particular interest. Sydney or Melbourne.

4. Small Computer Systems Division - Commercial Sales Manager
To obtain new business in the area of commercial systems design, programming, consulting and OEM sales on microcomputers, Sydney or Melbourne.

5. Small Computer Systems Division - H/W - S/W Packages
Dattec has developed a number of highly successful commercial systems on microcomputers. There is currently a vacancy for a salesman to manage the packaging of these systems and to sell the total system (H/W and S/W) to other organisations in the same industry. Sydney or Melbourne.

6. Perth Branch - Sales Manager
This position is second-in-charge to the Perth Branch Manager and is responsible for obtaining new business in the areas of consulting, contract systems and programming, and microcomputer turnkey contracts, etc.

Our founder and Managing Director will be visiting London to interview prospective candidates. Enquiries from Australian interested in returning home are also welcome. Send a brief resume (including a day and evening phone No.) to Mr. H. Douglas C/o Bertlett Jeffries Advertising Ltd, 23/25 Fleet Street, London EC4A 3NE, to arrive by November 7th.

Applications are invited for the position of Computer Room Supervisor at our Head Office, based on Marylebone Road, London.

The successful applicant, who must have at least two years' relevant experience, must be capable of taking full responsibility for all aspects of this operation. Systems currently processed on our main frame computers via an RJE terminal are in the process of conversion, to be run on a recently installed C.A.I. SYFA mini-computer, with implementation scheduled for early 1978. At present only one shift is worked, although it is anticipated that this may be extended.

The position offers a good working environment, together with the normal range of large company fringe benefits. Salary is negotiable dependent on experience.

PROGRESS INTO SALES WITH BURROUGHS EXCELLENT SALARY + BDNUSES + COMPANY CAR LONDON/BRISTOL/SOUTHAMPTON

Burroughs, best known for computer hardware and software, are leaders in this field of technology.

Burroughs UK is the largest member of the International Group.

Sustained expansion and continuous internal promotion has created a need for new members of the sales teams.

You must be self-motivated, ambitious and capable of adjusting to the personal and intellectual demands of a rapid career progression. Self-assurance is essential as you will be negotiating with senior executives and handling selected accounts including the UK's most prestigious companies.

A programme of intensive and on-going training will provide you with the professional skills to express yourself through personal effort and the determination to succeed.

If you have a degree or equivalent with a systems or sales background, but find yourself not realising your full potential in your current employment, then you and Burroughs could achieve success together. Ring now for an initial interview or write to Caroline Bagley.

CAREER DEVELOPMENT IN SYSTEMS PROGRAMMING

SURREY UP TO £4500 + BENEFITS

ARE YOU already a Systems Programmer wanting new challenges and more responsibility?

OR HAVE YOU 6-24 months general computing experience and ambitions to move into software and data base work?

This medium sized company has large scale computing plans, and needs people like you, with a degree or good A levels, to keep up the pace of new developments. A 370/158 with VS1 and IMS already supports one of the most sophisticated on-line data base systems in the country, and you will be offered excellent training and career opportunities as a member of this highly professional team.

In addition to a good basic salary there are significant fringe benefits (such as free lunches, bonus and mortgage scheme), flexible working hours in a pleasant semi-rural location, and good sports and social facilities.

READING & LONDON

The following vacancies are with a software house with units based in Reading and London, as well as in the North West. Although most of the vacancies will be based in the South, candidates with 2000 experience could be considered for future vacancies in the North.

2900 SYSTEMS to £8,000

There are a number of vacancies for 2900 experienced staff at all levels for Applications and Software support programmes as well as systems analysts. All candidates must have a strong programming background and must be suited to work in a customer environment. We are equally interested in COBOL programmers and technical staff who have worked on software support and have experience of VME/8, VME/K or IOMS. Systems applicants must be able to study and define systems requirements for large 2900 Users in order to design special systems. This will include proposal writing and implementation. Senior candidates should have been involved in the successful implementation of at least one project from design to installation. Ref. 873/CW.

DP MANAGEMENT to £8,000

Candidates with technical experience in DP Management are invited to apply for DP Manager/Consultant positions. The assignments will be based in the U.K., at customers' sites and will offer a variety of hardware as well as applications. We are looking for experienced personnel who have actively been involved in setting up at least one installation and have preferably worked on more than one type of hardware, including IBM, Burroughs, Univac, and ICL mainframes. They will have had a mixed background in Systems Programming as well as possibly operating Ref. 874/CW.

To apply for any of the above positions or for further information, please telephone or write to Renee Nute and Sandy Lloyd on 01-342 3366. If it would be more convenient to telephone in the evening, the telephone numbers are: Renee Nute, 01-874 6372; Sandy Lloyd, 01-891 6168.

Computer Programmer

Bottom Division of UOP Limited is the world's leading manufacturer of suspension seating for the truck, tractor and industrial equipment markets. We are currently seeking an experienced programmer to join our small but expanding O.P. Installation, which utilises an IBM System 3, Model 12. The successful applicant will have a minimum of three years' programming experience, using RPG II, and will probably have worked in a manufacturing environment. Commencing salary will be dependent upon age and experience, and the company offers a wide range of benefits, including 28 days' annual holiday and contributory pension scheme with free life assurance benefit. In first instance, please write or telephone for an application form to: Mrs. P. Cowgill, Personnel Officer, Bottom Division, UOP Ltd., Weydon Road Industrial Estate, Northampton, NN6 7JG (0604) 66621.

IMPERIAL COLLEGE POST-DOCTORAL RESEARCH ASSISTANT

required to study complexity and complete change of large programs. Research experience essential. Familiarity with ALOOL, Burroughs systems including MCP and Camplus, and Mathematical ability an advantage. Project has potential for fundamental breakthrough and involves intensive and innovative ability. Successful candidate will be based in London but much work will be carried out in large commercial organisation in Shetland. Appointment initially for one year but renewable. Salary on Scale L1, L16-L17, 7.77 per annum plus superannuation. Apply to: Professor M. M. Lehman, Department of Computing and Control, Imperial College of Science and Technology, London SW7 2BZ.

COMPUTER SYSTEMS TEST ENGINEERS

The Cable and Wireless Group is one of the leading telecommunications organizations in the world, embracing cable and radio systems, communications via satellite, telephone systems, computer and data handling. We are continuing to expand our activities in all areas of telecommunications, and require several Computer Systems Test Engineers to join our Development and Production Department. Responsibilities will include commissioning and system testing message switching systems using PDP8 mini-computers and Multiplex equipment manufactured in-house. Qualifications and experience should include HNC in electronics or equivalent, at least two years mini-computer experience, and systems design experience. Although not essential, some software programming experience would be an asset. We offer excellent commencing salaries, and generous benefits including leave and pension arrangements and flexible working hours. Please telephone or write for an application form to: Miss Christine Morgan, Cable & Wireless Limited, 114 Great Suffolk Street, London SE1 0SG. Tel: 01-828 1901 ext. 236.

Future Systems

A team of highly technical PROGRAMMERS and CONSULTANTS is currently being sought by a large and very progressive software house. The work will stretch right across the board from development of micro based software, compilers to interactive distributive processing software and message switching to advanced applications on a variety of machines.

Programmers £5000-£6000

This is a rare opportunity for PROGRAMMERS and DESIGNERS with experience of any of the above fields who have also had at least one year's assembler experience to join at the very early stages of development and be involved with the initial design phase. ENGINEERS with micro processing background will also be considered.

Consultants £6000-£7000

CONSULTANTS who are still highly technical and have had experience with more than one range of machines, minis, or communications are urgently required. Unique opportunities also exist in an advanced micro processor-linked project. Relocation expenses will be met where it is necessary to move to Berkshire. The company offers attractive terms, conditions and individual career prospects as well as possibilities for overseas travel. Please ring Stella Mitchell for a confidential discussion.

PL/I or COBOL PROGRAMMERS

£4,500 - £6,000

Looking to the future? We are!

Hambro Life started six years ago in 1971 - so did our computer systems. Both have expanded at an astonishing rate and we are now developing our systems to cope with the next six years.

Examples of our current projects are:

- an in-depth study of our database needs
- the evaluation of extending our on-line updating facilities
- the investigation of on-line programming techniques

Our major production systems are run in batch mode and are written in PL/I. We are, however, carefully introducing new on-line systems as the business requirements change to enable us to provide a complete service to our users.

Our installation consists of an IBM 370/145 and a 370/148 is to be added in November.

We are looking for four young highly competent programmers who:

- have 2+ years sound commercial background
- are strongly motivated to succeed and to meet difficult targets
- are willing, if necessary, to retrain in PL/I

Hambro Life is a vigorous, growth company, heavily dependent on computer systems, and provides the opportunities for career development to be in line with individual achievement. Progress within the Company is purely dependent on ability and salaries extend to £7000 for programmers who prove their effectiveness.

Fringe benefits include a generous disturbance allowance, relocation expenses to rural Wiltshire, free life assurance, non-contributory pension scheme, free membership of BUPA and a share option scheme.

COMPUTER DEVELOPMENTS On-line Transaction Processing in A Communications Environment

If moving into the manufacturing industry, embarking on a new phase of development excites you, then you should join us. We are recruiting for a number of positions in systems and programming in preparation for the installation of a new computer and its associated communications network of terminals in the Summer of 1978.

SYSTEMS STAFF

1. A SENIOR ANALYST is required to be responsible for our manufacturing systems. Previous experience in on-line processing is desirable, but experience in a manufacturing environment is essential.
2. A number of support SYSTEMS ANALYSTS to work either in the manufacturing areas, or on financial systems also needed.

Applicants must be self-motivated and capable of taking the responsibility for a particular application.

PROGRAMMING STAFF

3. A CHIEF PROGRAMMER is required to supervise and lead a small team of programmers. Experience of teleprocessing is highly desirable.
4. Vacancies also exist for programmers at different levels. One position will be of interest to a person with expertise in NEAT-3. Preference will be given to candidates with expertise in COBOL, TPS and Applications Manager. Salary will be in accordance with experience and position. Assistance with relocation expenses will be given where appropriate.

EUROPEAN BANKING

With one of the world's major corporations.
Systems Integrity within Internal Audit.

PROGRAMMER/ANALYST

£6500 + benefits

London based
After an initial assignment of three months in Brussels working on an NCR machine in NEAT/3, you will be required to ensure integrity of IBM based systems throughout Scandinavia and Western Europe.

RW 42/1

PROGRAMMER/ANALYST

\$20,000+

Brussels
A minimum of three years' experience, preferably in NEAT/3 on NCR equipment, could qualify you for this exceptional career opportunity. Banking experience is not mandatory.

RW 42/2

These positions exist within one of the world's leading banks. The career opportunities within the important and vital Internal Audit function reflect the rapid growth of this eminent organisation.

ARE YOU INTERESTED IN ORIGINAL SOFTWARE DEVELOPMENT?

A series of development projects on **COMPILERS, DBMS and TRANSACTION PROCESSING SYSTEMS**, are currently being undertaken by the software development group of this major manufacturer of mini computers. Based just outside London, this small group has total company-wide design and development responsibility for these projects.

If you are young (less than 30), intelligent, and enjoy creative programming (or even are bored with applications work), then these positions offer an unusually stimulating environment. The working surroundings are especially pleasant. Facilities include three systems dedicated to on-line program development. You will probably have some programming experience in a low-level language, real-time environment; you might well have a Computer Sciences academic background.

Above all, you will be attracted by the opportunity to create, develop and implement your own ideas in these important areas of software technology. Normal big company benefits include salaries in the range:

£4000+£6500

RW 42/3

PROGRAMMERS ANALYST/PROGRAMMERS

Up to £7000

SMALL BUSINESS SYSTEMS IMPLEMENTATIONS

IBM SYSTEM/3, SYSTEM/32, SYSTEM/34 ICL 2903/4

A major British software house is expanding its business in the area of small business systems implementation and software. This is a rapidly expanding area of business, and the company's continued growth will be constrained only by their ability to undertake and staff projects with high calibre personnel.

As a result, the company now wishes to recruit staff for their Small Business Systems Division. They will support commercial clients who plan to implement small mainframe computers for general business applications, using RPGII and COBOL as the main programming languages. Analyst/Programmers are responsible for systems design for the client, and prepare detailed programming specifications. They are expected to ensure the successful completion of projects to the client's entire satisfaction and according to agreed timescales. They will also supervise Programmers on clients' projects.

The company is one of the leading UK systems houses, established nearly ten years ago. It is backed by a substantial industrial organisation and is therefore well placed to take advantage of an expanding market. Most of its work has been UK based but it is now looking for a growing proportion of its work to come from Western Europe.

Candidates who have not worked with RPGII or COBOL, but who otherwise meet the requirements of the job should not be deterred from applying as training can be provided.

This is an excellent environment in which to develop your creative abilities and to make a meaningful contribution to the furtherance of your own career.

Please telephone Tony Baker on 01-499 4501 during business hours or 01-445 3512 at other times to discuss without commitment these opportunities.

Sales Executive

MAINFRAME DIVISION

SALARY → In excess of £10,000 in the first year, plus company car and expenses.

LOCATION → You will be based at our Chesham Head Office but will be selling our services in London and the Home Counties.

EXPERIENCE → You must have a good track record of successful selling in a DP environment. Experience of selling computer services would be an added advantage.

WORK CONTENT → The mainframe division of the company provides support services to computer users. Our services include time and materials programming and analysis, fixed price projects, consultancy and facilities management. Our client base is taken from many different business sectors and includes some of the largest companies in the UK. Other divisions in the company are involved in turnkey mini systems and data preparation.

CONTACT → Anne Truelove at 01-734 5351 or CHESHAM (02405) 74181, or use our answering machine if you ring out of office hours. Or send details to:

Recruitment Officer

You will be part of our Head Office staff based at Chesham.

You must have a good technical background in programming or systems. Experience of recruitment would be an added advantage.

As the sales division grows, so too does the need for more systems and programming staff, both permanent and subcontract. You will liaise with sales staff to identify future needs. You will help out on advertising, interviewing and selecting staff to match requirements generated by sales staff. This may be your first step out of technical DP work or the opportunity for you to consolidate your DP experience in a personnel role.

Ann Truelove at 01-734 5351 or CHESHAM (02405) 74181, or use our answering machine if you ring out of office hours. Or send details to:

one Square One Computer Services Ltd.

ARE YOU A CITY TYPE?

It so, you could well be interested in joining the compact and go-ahead DP unit of a large City Insurance Broking Group located in London, E.C.3 as a

SENIOR PROGRAMMER

c. £5,500 + fringe benefits

This unusual appointment offers:

- VARIETY** — including both applications programming and systems analysis.
- INVOLVEMENT** — considerable user contact; not a desk-bound job, plus the satisfaction of having a significant involvement in the formulation and development of new systems.
- RESPONSIBILITY** — you would be directly responsible to user departments in the Group for the development and maintenance of systems and programs.

On behalf of our clients, we seek an articulate, presentable Programmer or Analyst Programmer with:

- an IBM 360 or 370 background, embracing OS, JCL, COBOL and BAL
- a practical, business minded outlook and an interest in (or experience of) analysis work
- the ability to accept responsibility, work with little supervision and use initiative.

This career opening will probably appeal to someone who would welcome working in an unrestricted, environment with the opportunity to progress.

For an initial, confidential discussion, please ring us, quoting ref. 764W, or leave a message on our answering machine if after hours.

EDP Systems

London W1N 7FF
Tel: 01-637 5796

Are you looking after No.1?

Quite naturally, one of the most important things in your life is the opportunity to establish yourself in a successful career. Thanks to Series/I, we can offer you that opportunity as a Marketing Representative or Systems Engineer with IBM.

Series/I is a family of computing equipment that is small in size, flexible, powerful, and cost-effective as both a network controller and a remote work station.

With its variable storage capacity, processing speeds, and peripheral combinations, Series/I can be compared to a collection of building blocks. You simply select the best configuration to meet the customer's needs.

Supported by software which includes PL/I, Fortran, and a real-time operating system, designed for a wide variety of real-time applications; and can be interfaced with existing equipment—OEM terminals, teletype units, graph plotters—using a range of communications protocols.

Series/I's potential is enormous. We just need the resourceful men and women—ideally graduates, to help us

realise that potential. If you have practical experience in four of the following areas, we'd like to hear from you:

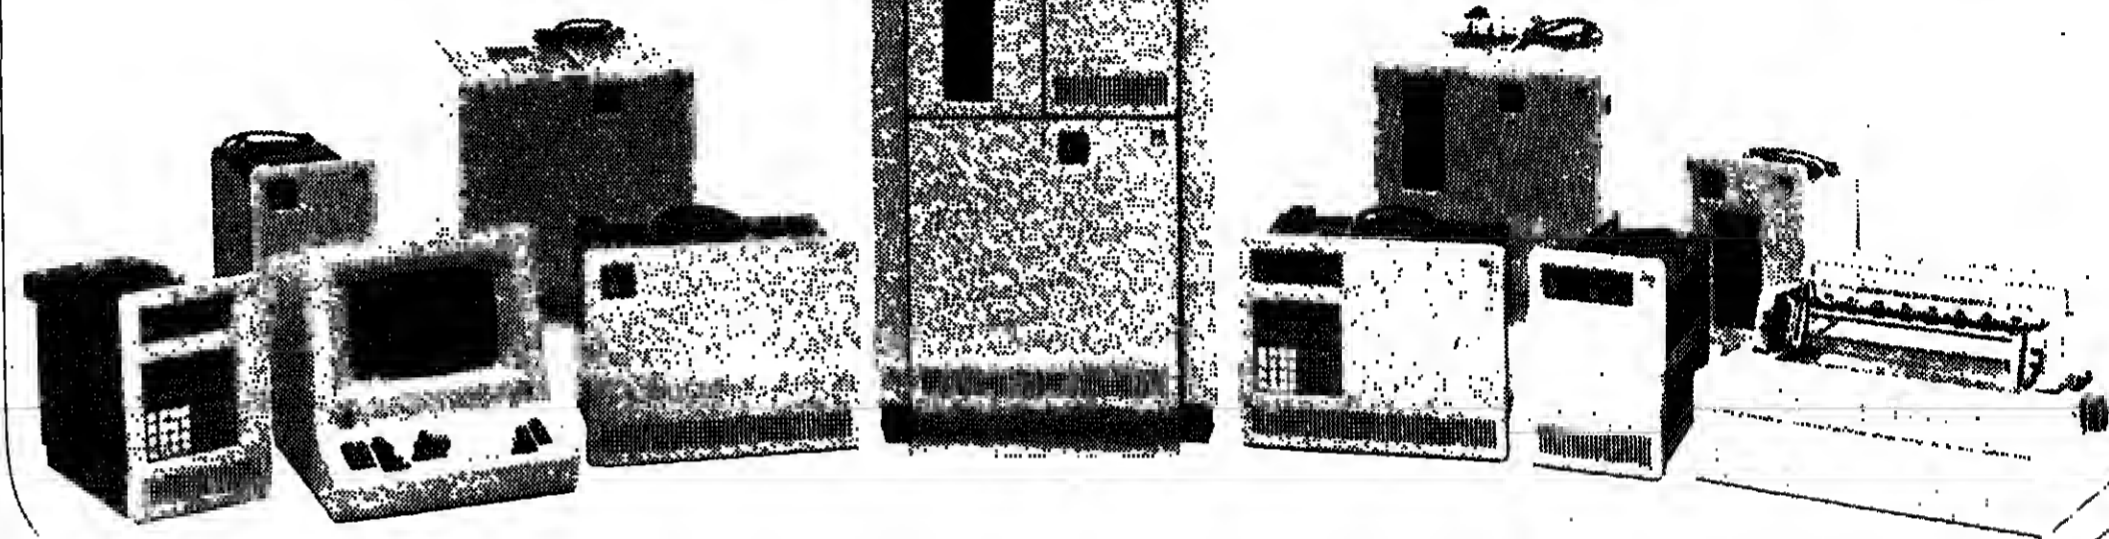

- Small computer applications development
- High-level languages—PL/I, Cobol, Fortran
- Communications and networking
- OEM interfacing and attachments
- Installation of distributed DP systems
- Real-time operating systems
- Systems design using small computers.

We'll back your understanding of small computer applications and DP sales operations with continual training, designed to give you all the confidence necessary to propose and implement effective solutions to customers requirements.

High earnings are directly linked to performance, and will be supported by a substantial range of benefits normally associated with a major international organisation.

We have opportunities in most parts of the country, so please write with full career details to: Mike Porter, IBM United Kingdom Limited, 40, Basinghall St., London EC2, quoting ref:

PROGRAMMERS

RANGE UP TO £5,000

ON-LINE SYSTEMS DATABASE DEVELOPMENT

WEST LONDON

Further development within our client's data processing centre has created two openings for well motivated Cobol programmers to assist with the development of new ON-LINE systems and DATABASE development. Although systems are desk based an initial knowledge of hardware gained in IBM or other leading hardware will be given serious consideration.

Our client is a well-known international organisation mainly concerned with the production and marketing of industrial and agricultural equipment. The two appointments advertised are a realistic opportunity to develop and broaden one's current achievements within a friendly and forward thinking company. For further details please quote CW 160.

ICL OPERATORS G2 and G2+ HOME COUNTIES (WEST)

£3,900 rising to £4,300 after one year

Here is an opportunity to join a leading international organisation whose products are brand leaders in the power tool market.

Currently they require additional operations personnel with at least 16 months' experience of G2 or G2+. Systems are based on an ICL 1903T running under G2+ with on-line facilities.

The D.P. Centre is spacious and well planned, with an excellent working atmosphere. The company operates a policy of internal promotion. Other benefits include four weeks' annual holiday, a subsidised restaurant and generous discount on company products. For further details please quote CW 161.

SYSTEMS ANALYST PROJECT LEADER

SURREY c. £5,000

We are recruiting on behalf of a large independent public organisation who operate as financial, professional and commercial agent for overseas government and public authorities.

ANALYST. Candidates should have sound experience in SYSTEMS ANALYSIS along with four years' programming encompassing on-line systems. A knowledge of Honeywell equipment would be advantageous.

PROJECT LEADER. Candidates' experience should be similar to that of the analyst appointment (paragraph above), coupled with management and leadership skills having a minimum of five years' overall data processing experience. Currently systems are Honeywell 1200 based progressing to a Honeywell level 88 next year. For further details please quote CW 162.

SENIOR PROGRAMMER

SALARY c. £6,000 p.a.

LONDON, SW1

A highly specialised consultancy is currently seeking an experienced senior programmer to assume total responsibility for the company's commercial programming activities.

The candidate should have a minimum of five years' experience of Cobol coupled with a sound knowledge of the IBM 605 Operating System. An ability to deal with personnel at all levels is essential. Additional duties will include providing technical support to the operations team in respect of this system as well as within the related IBM 605.

This is a key position for someone with the right qualities whose background combines both staff and production, in keeping with the company's time requirement for providing a good and efficient service. For further details please quote CW 163.

HEXAGON COMPUTER SERVICES immediately require the following:

SENIOR ANALYSTS & ANALYST PROGRAMMERS

£5-10K

Can you work entirely on your own or perhaps lead a project team? Our clients are so many and varied in their requirements that we can offer long-term contracts to individuals with the ability to work with senior management, solving high-level problems. Systems specs with still appreciating the problems of implementation. Ideally on ICL, IBM and/or other large mainframe computers. It is important that you have the ability to program in COBOL or PL/I. Through generally it would not be expected of you.

FREELANCE OR PERMANENT PROGRAMMERS

£4-9K+

You may require a variety of different environments, working with new tech, or taking on the challenges that are constantly varying as a freelancer, or you may prefer the security of a permanent job with strong career potential and the invaluable training given in regular employment. Whichever your preference our lives can offer you hundreds of opportunities to choose from, both in the UK and abroad. Register with us today by ringing for immediate action.

COMPUTER TERMINAL OPS

from £70 p.w.

We have contracts leading to permanent jobs particularly for students, educated to 'A' level standard, ideally with some experience in data control or JCL (though not essential). Preference will be given to those with some previous experience with OS/VS or EXEC 8.

SNR OPS — SHIFT LEADERS

£4-5K+

We have many vacancies for career-minded operators who will be able to take on the junior management position. Ideally you will have a minimum of 2-3 years IBM DOS or perhaps ICL GEORGE background — but we can also assist operators with Honeywell, Univac or Burroughs experience.

Telephone us today on 439 3671 for an application form or to discuss your career prospects.

5th FLOOR SUITE 145 WARDOUR STREET LONDON W1V 6BS

It stands to reason. If you've spent some years in data processing you know how to translate User requirements into effective applications. Well, NCR can use that valuable knowledge. In fact it is absolutely essential in selling computers today.

NCR is an international Company operating world-wide. With millions of pounds invested in computer development.

We produce one of the widest ranges of equipment. From standard terminals, VRC's and minicomputers to advanced mainframes. With sophisticated systems of great appeal in retailing, banking, commerce, industry and local government.

Your DP knowledge interfaced with our technical and sales/marketing know-how can represent great sales potential. We should exploit it together.

Provided you are confident and convincing in your approach to people, we'll channel your computer career into a more rewarding path. We'll teach you equipment technicalities and modern sales techniques and you could soon find yourself negotiating complete systems. Eventually, that could include mainframes like our latest Criterion series.

So don't just deplore the tedium of your job. If you want to be out-and-

Computer Specialists & Systems Analysts have great potential for DP sales. Agreed?

about in the more exciting world of DP sales — do something about it. Come and talk with us. Let us show you what we've done for others just like you. And how they started to earn real money by capitalising on their DP background.

We'll take a phone call or you can write for an early interview to: — H. J. Redington, Personnel Controller, NCR Limited, 20th Marylebone Road, London, NW1. Tel: 01-723 7070.

Real Time Software

SYSTEMS ANALYST/SENIOR PROGRAMMER

£4900 - £6400

The Central Electricity Generating Board invites applications for the above position at its Computer Branch.

The Computer, a 192K I.C.L. 1903T is at Bramhall, Stockport, but this job may take you on lengthy assignments elsewhere e.g. North Wales or North Lancashire. You will be part of the station liaison team providing a computing service to power stations, using both the ICL 1903T and their own equipment (Ferranti, G.E.C., D.E.C.). You should have had considerable experience of COBOL or FORTRAN, Operating Systems, Data Base entry and enquiry systems and be capable of designing, specifying and implementing small systems.

A knowledge of real time logging and control applications would be an advantage.

Minimum qualification required — 'A' level Mathematics.

Applications in writing from either sex, giving details of age, experience, qualifications, etc., to the Personnel Manager, CENTRAL ELECTRICITY GENERATING BOARD, Europa House, 1st Floor, 100, Broad Street, Birmingham B1 2QA, to arrive no later than 2 November, 1977.

Please quote Vacancy number 397/547

MYRIAD APPOINTMENTS LIMITED

Computer Personnel Consultants

SENIOR ANALYSTS

£6000

Opportunities for Senior Systems Analysts have been created by an increase in new projects in an advanced installation using mainframes and minicomputers.

The company is involved in the use of Distributed Processing techniques and in the development of sophisticated systems using a Database and Teleprocessing facilities. The use of financial models is to be investigated. There is also a variety of commercial systems including Stock and Distribution applications. Future hardware and software requirements are being assessed.

Applicants should be able to offer sound systems analysis experience. Successful candidates will be given the opportunity to develop their skills, both of a technical and leadership nature.

The location is also very accessible from many areas of West Essex and North London. Terms of employment and fringe benefits are excellent.

PROGRAMMING STAFF

At least 2 years' experience

WEST LONDON IBM 370 OS

**Senior c £5250
Systems c £5500**

We are seeking capable PROGRAMMERS keen to enhance their career by a move to either a SENIOR or SYSTEMS PROGRAMMING role as a member of a newly formed team. The installation is implementing several new Systems with a development plan covering the next three years, including both communication network and database applications.

You are likely to have either sound applications experience using COBOL or, for the Systems Programming vacancy, a knowledge of IBM Software. An appreciation of manufacturing systems and an ability to communicate at all levels would be an advantage.

The salary and benefits package are commensurate with experience and will be in line with those given by a major International Company.

IBM SYSTEM 32 SPECIALIST

Permanent or Contract

CITY TO £6500

A London based financial organisation with branches throughout the world is seeking a person with in-depth knowledge of IBM System 32 issues.

The person appointed will play a major part in the development of branch systems, using a distributed network of System 32's, and can look forward to the opportunity of limited travel to countries in Europe.

Candidates must be experienced in the analysis and programming of applications on System 32's.

The Company is prepared to offer the successful candidate a permanent position within the Computer Department which offers excellent career prospects, or if preferred a twelve months contract can be established with the possibility of extension.

ANALYST

CITY c £5750

A systems analyst with sound experience in commercial systems design and an ability to progress towards project control is required to augment an active team in the City.

Candidates will be used to functioning in a team environment, working to good standards supported by comprehensive documentation. A background in programming would be an added advantage.

The successful applicant will be involved in unusual and interesting applications and will have the opportunity to establish good working relationships with user department personnel at both junior and senior level.

Conditions of employment are excellent, the company offer a comprehensive package of benefits.

Please telephone for a confidential discussion or write to:
30 Fleet Street London EC4Y 1AA
01-353 5868

Three open invitations to find out about the very latest software developments.

Liverpool

The Adelphi Hotel, Rensleigh Place, Liverpool L3 5UL.
Wednesday October 26th, 12 noon to 8pm.

Radlett

The Red Lion Hotel, Watling Street, Radlett, Herts.
Wednesday November 2nd, 12 noon to 8pm.

Southsea

The Pendragon Hotel, Clarence Parade, Southsea.
Thursday November 3rd, 12 noon to 8pm.

REAL ALE

If someone asked you as a Software Specialist where the very latest software developments were happening, what would you say? With one of the big mainframe manufacturers? In some US research centre?

You'd probably be surprised to hear that the answer's at STL, the ITT Corporation's chief European research centre, a centre principally involved in the research and development of telecommunications.

And if you'd like to hear more about those software developments behind the communication systems of the future, now is a very good time to do it because some of the senior computer specialists from STL are travelling round the country to three venues in the next few weeks to meet Analysts and Programmers — and tell you at first hand about the exceptional career opportunities we have for men and women with a degree or equivalent and at least two years' experience in real-time programming, operating systems and technical DP or — for microprocessor work — knowledge of 8080a, high level languages and telecommunications. There are vacancies at several levels in these areas: **advanced computer aids for development of software, associated with new products; design and layout for LSI chips and PCBs; circuit analysis and simulation; development of test languages; automatic generation of test sequences; and the new applications of microprocessors — real-time systems control, process control, software research.**

You'll also be able to see with the aid of an audio-visual presentation all the advantages there are in living and working in and around Harlow, an essentially rural area on the Herts/Essex border where housing is readily available and attractively priced, both in the town itself and in the villages which surround it. And London is near enough if you need it. The people you'll meet will be able to tell you all about it.

If it's not convenient to meet us on these dates, please write or telephone Vaughan Hartridge, Standard Telecommunication Laboratories Limited, London Road, Harlow, Essex CM17 9NA. Tel: Harlow 29531, extension 361.

STL

ANALYST/PROGRAMMER

Salary Circa £5,000

Company

Gainsborough Fabrics Ltd is a member of the international Carrington Virella Textile Group engaged in the production of warp and weft knitted fabrics for apparel and industrial and uses. It is situated in rural Suffolk and is the headquarters of the Knitting Division.

Job

As our Computer operation is at present being redesigned a challenging opportunity exists for a person who has initiative and is adaptable to gain valuable experience in this phase of development. The applications of our operation are in the production, commercial and accountancy areas.

Person

Applications are invited from persons with a minimum of 'A' level education together with 3 years' Cobol experience and 2 years' Systems Design, preferably in an industrial environment.

Benefits

A salary, which is negotiable of circa £5,000 together with an attractive fringe benefits package offered and relocation expenses will be paid where appropriate.

Write or telephone for application form to: G. R. & Bell, Personnel Manager, Gainsborough Fabrics Ltd, Radcliffe Road, Great Cornard, Sudbury Suffolk CO10 0HY

Gainsborough Fabrics

A Carrington Virella Company

TOP JOBS FOR TOP PEOPLE

SURVEY ANALYSIS MANAGER

The WEST END offices of a nationwide Bureau Operation has an immediate requirement for a professional person to take charge of a small department in Media and Market Research applications. The ideal applicant will be aged around 30 and possess a good systems and programming background, but will primarily be a first-class Manager. This position would probably be particularly suitable for someone who is currently OP Manager of a small mainframe installation and is looking for the opportunity to broaden their experience within a more sophisticated environment. A knowledge of IBM Equipment and FORTRAN would be a considerable advantage, as would some previous involvement with Market Research applications, but this is by no means essential.

to £6,000 p.a.

SENIOR ANALYST/PROJECT LEADER

A major consumer organisation with its DP Operation based in a pleasant area on the HERTS/ESSEX BORDER is currently looking for a Senior Systems Analyst to fulfill a Project Leader function. The successful person will have solid commercial analysis experience with a good knowledge of on-line or distributed processing investigation. He or she will be responsible for a team of analysts and programmers and will be expected to work largely on his own initiative.

to £6,500 p.a.

Opportunities also exist for JUNIOR ANALYSTS or ANALYST/PROGRAMMERS, wishing to progress into pure systems work. Salaries c. £4,500 p.a.

FLIGHT SIMULATION EXPERT FOR THE U.S.A.

If you have a minimum of 3 years' design and programming experience on engine simulation and flight systems with a solid grounding in PDP 11/45 ASSEMBLER, then this is your chance to see a bit of the world at someone else's expense. You will be based in the States for at least six months, with all expenses paid and a flat provided, after which, there will be an excellent position available in the U.K. should you desire.

£ Neg.

Starting salary for this one is negotiable and will pose no problem for the right person.

PROGRAMMING CONSULTANTS

A major Computer Services Company located on the BUCKS/HERTS BORDER has an urgent requirement for professional Programming Consultants with the following experience.

c. £6,500 p.a.

MINI COMPUTER SOFTWARE people with compiler writing experience, and MINI COMPUTER APPLICATIONS people with experience of FORTRAN, BASIC, etc., to work on DEC, Hewlett Packard and Data General machines operating on a turn-key basis with minimal travelling involved.

Systems Analyst

Large International Bank
Salary: c £6,000 plus mortgage subsidy

Initially, this position will be based in Frankfurt and London and the successful applicant will be expected to commute for approximately 5-8 months to Frankfurt on a weekly basis. Thereafter, the position will probably be based in London.

We are looking for a person who may now be working as a Systems Analyst or as an Analyst/Programmer and who is looking for a position which offers a more interesting career step. A logical and organised approach to work is as important as a technical background. Experience in the use of File Structures and Design, Information Retrieval Techniques and File Access methods would be a considerable asset, as would a knowledge of mini computer equipment. A knowledge of banking practices would be an advantage although this is not essential.

His or her first assignment will be to set up and maintain a system to control date definition and their use within our client's computer system. In the longer term, it is intended to maintain date definitions on a computer based Date Dictionary and to use this as the major reference source and control. He or she will be responsible for establishing and controlling this interface also.

The position is an extremely important one with considerable responsibility, and is based within a successful and dynamic systems environment.

Please contact John Goldsmith quoting reference no. 959.

William Key & Partners Limited
COMPUTER SYSTEMS ENGINEER
MANCHESTER

KRATOS Ltd manufactures the OS60 and OS300 ranges of data systems which provide real time processing of data generated by scientific instruments.

KRATOS now needs a COMPUTER SYSTEMS ENGINEER to be responsible to the Data Systems Product Manager for the specification, procurement, checking and installation of the system hardware.

Applicants for the post should have:

- * Sound knowledge and practical experience of mini-computers using high level operating systems.
- * Minimum of 2 years' experience of installation and/or commissioning.
- * A degree or equivalent in Computer Sciences.

A competitive salary is offered.

William Key & Partners Ltd. have been retained to fill the above post. Please write with brief details on telephone for an application form: Mr. S. Key, William Key & Partners Ltd., 504/505 Corn Exchange Buildings, Corporation Street, Manchester M4 5SD. 061-234 2271 during office hours, or 061-234 5436 at other times. Ref: GW 0609.

BOROUGH OF HYNDURN
Borough Treasurer's Department
COMPUTER PROGRAMMER
AP.2/3 £2529-£3282 + £312 salary supplement + phase 2 supplement

The Council operate an ICL 1901A with tapes and discs. Candidates must be experienced in COBOL. Assistance will be provided with removal expenses, and provision of housing accommodation, in approved cases. Application forms and job descriptions available from the Personnel Officer, Town Clerk's Department, Municipal Offices, St. James Street, Hyndurn, Lancs. BB5 1PQ. To whom they should be returned not later than 7th November 1977. Ref: 141. Successful candidates will be interviewed by a Selection Committee of Senior Officers or Members of the Council will automatically be appointed.

ANALYST/PROGRAMMERS

Head Office Development for Overseas Branches
Circa £6000 plus benefits

Lloyds Bank International requires additional analyst/programmers for its overseas development and support group within its Computer Services Department, based in the City, to work as part of a small highly skilled team.

The job is to assist in the development of generalised Banking Computer Systems which are to be installed on IBM System 32 and 34 computers in overseas branches of L.B.I. The work will be carried out in London but opportunities for overseas travel may occur from time to time.

Ideally candidates will be in their mid-twenties, be well educated, probably to at least 'A' level standard and should have had at least four years' experience either as a programmer or analyst/programmer preferably using IBM System 3 or 32 computers in a banking environment.

The starting salary will reflect age and experience but it is unlikely that anyone currently earning less than £4500 would have the desired qualifications and experience. The position offers very good career prospects.

Interested applicants should write or telephone, stating qualifications and experience, to: Simon Wootton, 01-248 9922, Ext. 338

CHIEF SYSTEMS PROGRAMMER

Outside the £6425 COSHE 5 year. Applicants are invited to man and woman who are graduates in the above field, available at once or possible. The successful candidate will lead a team of systems programmers. Experience in systems programming and management of other programmers required. Salary scale as quoted above plus superannuation.

Particulars from the Registrar and Secretary, The University, Sheffield S10 2TN to whom applications should be sent by 11 November 1977. Please quote ref. R44/88

The Polytechnic of North London

LONDON POLYTECHNIC COMPUTER UNIT

Systems Programmer or Senior Systems Programmer

The hardware ICL 1902 (806) with data and magnetic tapes, cards and paper tape, graph plotter, 7020; plus access to a time-sharing system.

The software: George 2, Fortran, Algol 60, Cobol, Plan, Algol 68, etc. and application packages.

The job: Software maintenance and enhancement, user support on both computers, documentation, applications programming, hardware and software evaluation.

Qualifications: Degree or professional equivalent. Familiarity with 1902 or 1904 and experience with micro-processors would be an advantage.

Salary: On scales up to £2288 for a Programmer and up to £2008 for a Senior Programmer (including London weighting and savings supplement) depending on previous experience.

Further details and application form from Head of L.P.N.L., Polytechnic of North London, Holloway Road N7 8BB.

oxford polytechnic

Department of Mathematics, Statistics and Computing

LECTURER/SENIOR LECTURER in DATA PROCESSING

Salary £2,744 - (Net) - £3,908

To teach Data Processing and Systems Analysis on BSC and ICL computers. Successful candidate will be responsible for the development of the Data Processing course, the design and development of the course material, and the supervision of the course.

Applicants will probably be in their early 20's with a minimum of 12 months' relevant experience ideally but not necessarily in Systems/3.

Salary will be around £3,000 per annum, plus other big Company fringe benefits.

Please contact: P. Geyker, **PLOUGH (UK) LTD.**, Fourth Street, London SE18 7TR. Telephone 01-439 4363

Computer Operators

£3,500 including Shift Allowance

Vacancies have arisen at our Prescott Centre on Merseyside for experienced computer operators (male/female) with a minimum of 18 months' experience on ICL 1900 equipment. George III knowledge preferred.

The department operates a 3 shift system using a 256K 1904S equipped with direct access and on-line George III data communications facilities. Conditions are attractive and commensurate with a large multinational company.

Applications in writing to: L. Barker, Personnel & Administration Officer, Group Management Centre, BICC Limited, P.O. Box 1, Prescott, Merseyside L34 5DZ.

BICC

Operator

c. £3,000 plus

We are part of an International Organisation using an IBM System/3 Model 10 which will be upgraded to a large Model 8 with teleprocessing later this year. We require a Computer Operator to join our small but successful team.

Applicants will probably be in their early 20's with a minimum of 12 months' relevant experience ideally but not necessarily in Systems/3.

Salary will be around £3,000 per annum, plus other big Company fringe benefits.

Please contact: P. Geyker, **PLOUGH (UK) LTD.**, Fourth Street, London SE18 7TR. Telephone 01-439 4363

THE SALES BIT

Watch your tongue

TRAVELLING AND DINING with colleagues and clients often presents an excellent opportunity for discussing important business matters. Perhaps the implications of the new equipment you are about to install, the opening of a new branch office, the highlights of your prospect portfolio, or the details of an important proposal.

Unfortunately, whether travelling first or second class, dining at the Ritz or Joe's Caff, there is no way of assessing whether you are in the company of disinterested bystanders or fascinated competitors.

Several years ago a friend of mine, and a significant personality within the history of the UK computer industry, needed to buy air conditioning equipment for a substantial installation.

During the journey to London my friend was intrigued to overhear the conversation of two men who were leaning over a large blueprint on the table opposite.

They were discussing their tactics for a forthcoming meeting. What they would say when they arrived, who would handle what aspects of the conversation, their opening and bottom prices, making such remarks as "We'd better not mention that" and "That's not as good as it might be."

Later that day my friend saw the first of the contenders for the new air conditioning equipment, and who should be their representatives but — you guessed it — the two men on the train! Right, and you guessed it again! They didn't get the business.

The implications of having business conversations overheard are fairly obvious; yet people continue to do it, both senior and junior personnel alike, even though such carelessness could easily result in the loss of a forthcoming sale or an existing client.

So, if you must discuss your business publicly, keep it quiet, use no proper names of companies, products or personalities, and make it brief.

Conversely, if you are travelling or dining alone just listen to the world around you. The loose talk of other people is fair game.

And next time you visit the pub with the lads from the office, just think about all those clients, potential clients, competitors, journalists, recruiting agents, government officials and divorce detectives who might be in there with you.

Trader

Puzzle answer

GIVEN one side x of a right-angled triangle, and the difference d between second side and hypotenuse, then

$$x^2 = d^2 + 2dy$$

equals Length of Hypotenuse. This makes AC 25.5 in our particular case.
